

ICD10PCS to SNOMED standardization

The problem: Standardization

HCPCS

Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service

ICD-9-Proc

Aspiration of bone marrow from donor for transplant

CPT-4

Bone marrow; aspiration only

SNOMED

Aspiration of bone marrow from donor for transplant

READ

Aspiration of bone marrow NEC

OPCS4

Diagnostic extraction of bone marrow NEC

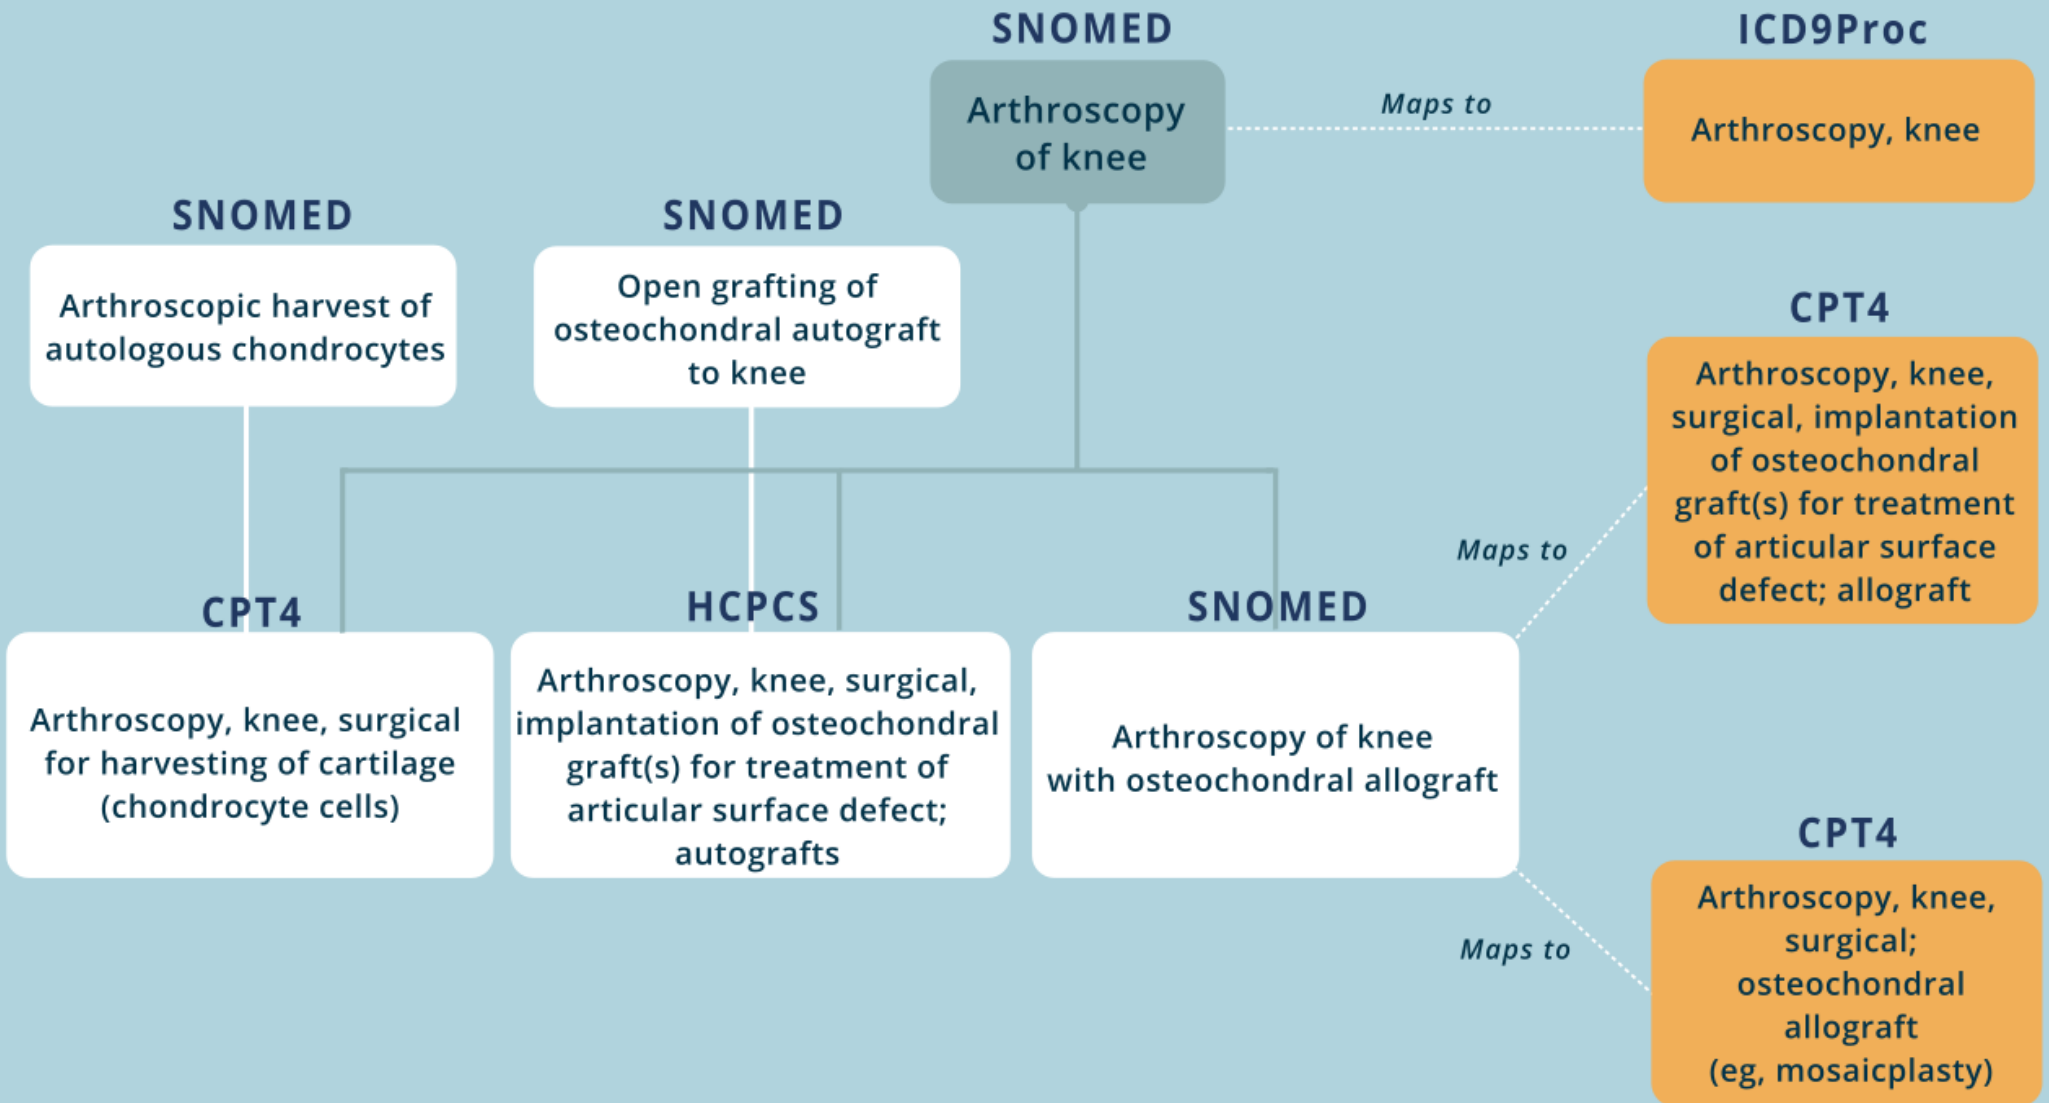

OPS

Bone marrow aspiration

SNOMED CT is the common target for standardization.

Solution: comprehensive hierarchy

Idea behind ICD10PCS

- ICD10PCS has 7 attributes (body sites, surgical approach, type of device or drug used)

0D16479 Bypass Stomach to Duodenum with Autologous Tissue Substitute, Percutaneous Endoscopic Approach

- 0. Medical and Surgical
- D. Gastrointestinal System
- 1. Bypass
- 6. Stomach
- 4. Percutaneous Endoscopic
- 7. Autologous Tissue Substitute
- 9. Duodenum

Out of ~80 000 codes, only 40 000 exist.

Examples:

00UM3JZ Supplement Facial Nerve with Synthetic Substitute, Percutaneous Approach

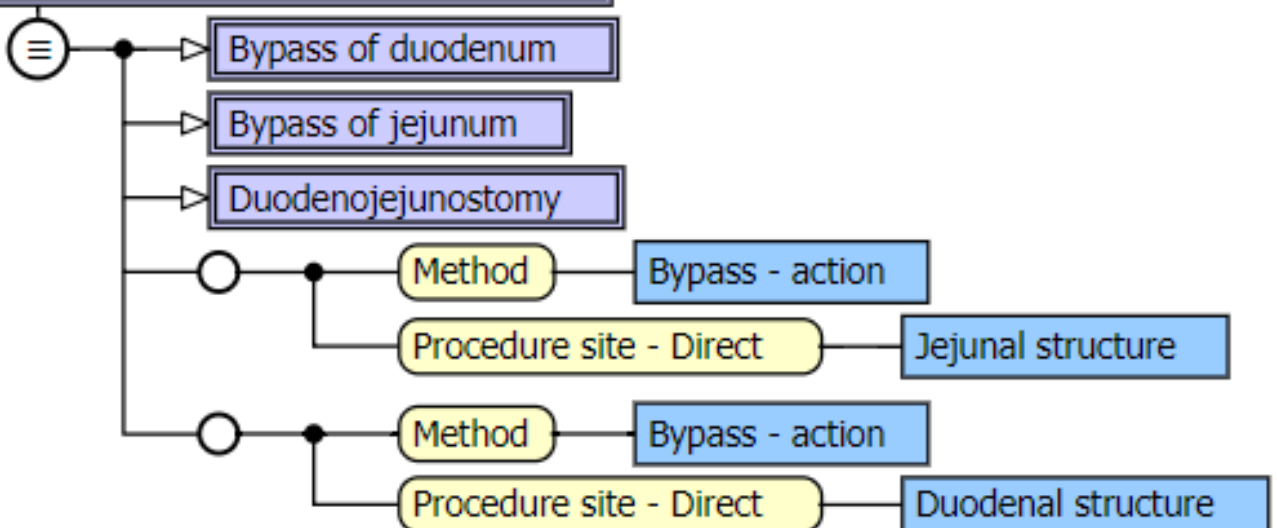

3E0604Z Introduction of Serum, Toxoid and Vaccine into Central Artery, Open Approach

SNOMED model:

- SNOMED procedures also have attributes
- Own attribute-value pairing mode, multiaxial hierarchy
- Inherited from ancestor concepts, normally with increased granularity

Bypass of duodenum by anastomosis of duodenum to jejunum

Parents:

Attributes:

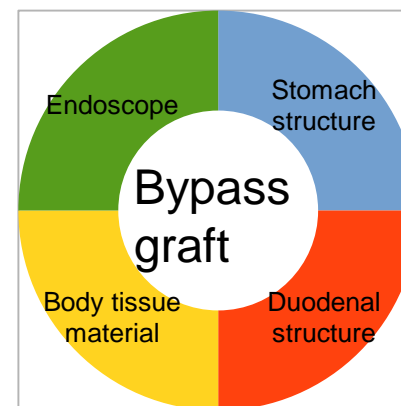

Attribute translation for ICD10PCS

Less than 2000 unique attributes - mapped manually

0D16479 "Bypass Stomach to Duodenum with Autologous Tissue Substitute, Percutaneous Endoscopic Approach"

0. Medical and Surgical	removed as direct ancestor of «Bypass graft»
D. Gastrointestinal System	removed as direct ancestor of «Stomach»
1. Bypass	48537004 Bypass graft (procedure)
6. Stomach	69695003 Stomach structure (body structure)
4. Percutaneous Endoscopic	37270008 Endoscope (device)
7. Autologous Tissue Substitute	413675001 Body tissue material (substance)
9. Duodenum	38848004 Duodenal structure (body structure)

Filtering cycle - automated part

Attribute transition

Attributes for 0D16479 "Bypass Stomach to Duodenum with Autologous Tissue Substitute, Percutaneous Endoscopic Approach"

Hierarchical representation:

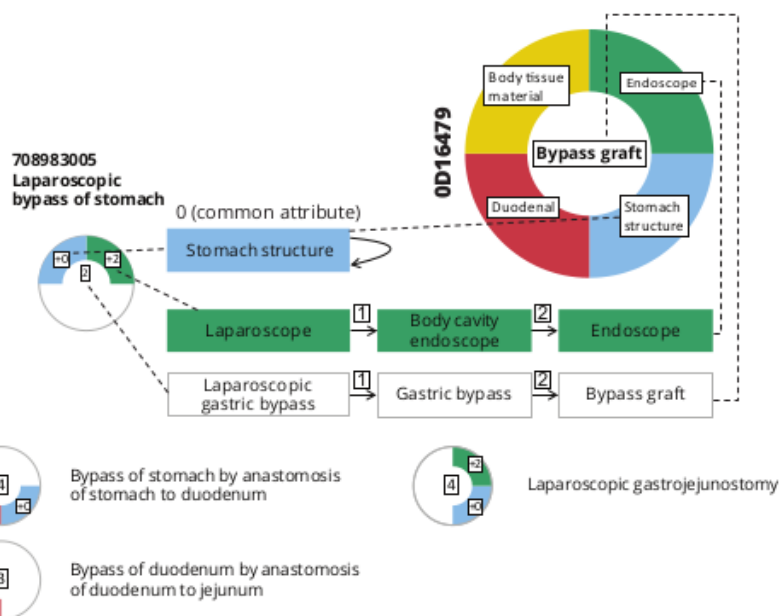

1. Medical and Surgical
2. Gastrointestinal System
3. Bypass
4. Stomach
5. Percutaneous Endoscopic
6. Autologous Tissue Substitute
7. Duodenum

When mapped to SNOMED CT attributes:

1. Medical and Surgical - removed as direct ancestor
2. Gastrointestinal System - removed as direct ancestor
3. 48537004|Bypass graft (procedure)
4. 69695003|Stomach structure (body structure)
5. 37270008|Endoscope (device)
6. 413675001|Body tissue material (substance)
7. 38848004|Duodenal structure (body structure)

Examples from test pool

Filtering cycle

Procedure-attribute is always defined at least once across entire ICD10PCS, every other attribute is needed for further specification. At this moment we process candidates remaining in test multiple times, aiming to find closest parents with smallest difference in each of defining attributes

For each meaningful defining attribute

1. Copy remaining pool; keep only SNOMED candidates that have match on defining attribute currently investigated.

In red pool, keep only SNOMED CT procedures with

2. Find what is the biggest number of matches each ICD10PCS procedure has per candidate; keep only candidates with maximum amount of matches in attributes between source and target.

358575006
Gastroduodenostomy

stay,

305621000
Bypass of duodenum by anastomosis of duodenum to jejunum

is removed

3. Among remaining candidates keep those with most precise attribute set: defined by having smallest sum of distances between attributes of candidate and ICD procedure (adding up min_levels_of_separation).

358575006
Gastroduodenostomy

= 1 stays,

18692006
Bypass gastroenterostomy

= 3 is removed

4. Among remaining candidates keep those closest to procedure-attributes (max_levels_of_separation).

358575006
Gastroduodenostomy

stays,

427980007
Sleeve gastrectomy with duodenal switch

is removed

Write remaining matches in the final table

Exit cycle

Switch to the next attribute

All attributes processed

Results (in numbers)

We have found direct parents for more than 40 000 leaf-level ICD-10-PCS concepts most commonly encountered in patient data

Number of immediate ancestors per ICD10PCS concept

Number of active attribute relations per ICD10PCS concept

Multiple parents for ICD10PCS concepts exist because of high granularity and the need to represent each aspect of the procedure

Bypass Left Kidney Pelvis to Left Ureter, Open Approach (ICD10PCS)

Open repair of kidney or renal pelvis (SNOMED)

Bypass of ureter (SNOMED)

High number of attributes (>5) is caused by inheriting new attributes from SNOMED parents

Marginal cases: Low number of parents & attributes:

Number of immediate ancestors per ICD10PCS concept

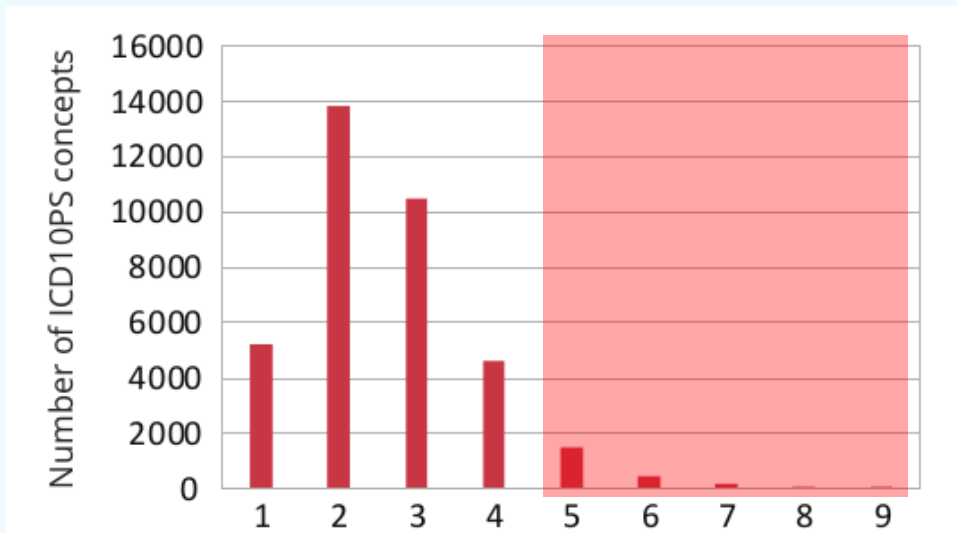

Number of active attribute relations per ICD10PCS concept

- Psychotherapy, Yoga, Osteopathic procedures, Counselling etc.
Such procedures fall outside of SNOMED attribute-value model and have generic ancestors

concept_id	concept_code	concept_name
2788028	5A0955Z	Assistance with Respiratory Ventilation, Greater than 96 Consecutive Hours
2788036	5A1935Z	Respiratory Ventilation, Less than 24 Consecutive Hours
2788037	5A1945Z	Respiratory Ventilation, 24-96 Consecutive Hours
2788038	5A1955Z	Respiratory Ventilation, Greater than 96 Consecutive Hours
2788842	8E0ZXY1	In Vitro Fertilization
2788843	8E0ZXY4	Yoga Therapy
2788845	8E0ZXY6	Isolation
2790624	F003GYZ	Communicative/Cognitive Integration Skills Assessment of Neurological System - Whole Body using Other Equipment
2790625	F003GZZ	Communicative/Cognitive Integration Skills Assessment of Neurological System - Whole Body

Marginal cases: High number of parents:

Number of immediate ancestors per ICD10PCS concept

Number of active attribute relations per ICD10PCS concept

1. Duplicating branches in SNOMED (transfers, grafts, autotransplantations)
2. Complex procedures which belong to multiple subhierarchies: Biopsies (both biopsies and excisions)

Why are all concepts kept Standard?

ID ▼	CODE ▼	NAME ▼		
4062872	171479006	Open division of brain tissue		
Subsumes		Division of Brain, Open Approach	2722333	ICD10PCS
		Division of Cerebral Hemisphere, Open Approach	2722336	ICD10PCS

Why not 'Maps to'?

00800ZZ Division of Brain, Open Approach exists next to **00870ZZ** Division of Cerebral Hemisphere, Open Approach in ICD10PCS vocabulary

If we build 'Maps to' for **00800ZZ**, clinical procedures coded **00870ZZ** would become a subset of such procedures.

Citing B4.1a of official [ICD10PCS guidelines](#):

If a procedure is performed on a portion of a body part that does not have a separate body part value, code the body part value corresponding to the whole body part.

Example: A procedure performed on the alveolar process of the mandible is coded to the mandible body part.

That means **00800ZZ** actually is "Division of **Other Brain**, Open Approach"

Possible, but requires additional analysis and rules!

What problems have we faced?

Main problem: Inconsistency

- Generic attributes and parents of specific concepts.
- Often we have trouble finding the right concept due to their 'sloppy' assigned attributes.
- Problematic concepts need to be excluded manually during debugging process

This will lead to any venous imaging procedure being matched directly to Epidural Venography

Next steps

- Extend hierarchy to all leaf-level ICD10PCS concepts
 - SNOMED automated QA and attributes reassignment
 - Generalization of algorithm to accommodate other possible sources (currently testing for German OPS)
 - Integration of ICD10PCS Hierarchy concepts and ICD10PCS own attributes to also exist in SNOMED hierarchical tree
-

Procedure domain

done:

- ICD9Proc, OPCS4, ICD10PCS, HCPCS

upcoming

- OPS – we are working on them using ICD10PCS approach
- CPT4 – no attributes defined, needs investigation

The same principles as for ICD10PCS are used
