

The European Health Data and Evidence Network portal - a one-stop shop in EHDEN

Alina Trifan, João Almeida, José Luís Oliveira {alina.trifan, joao.rafael.almeida, jlo}@ua.pt IEETA/DETI, University of Aveiro, Portugal

What is EHDEN?

• EHDEN Portal predecessor – EMIF Platform

EHDEN Portal components

Demo

Mission

Develop a federated network, standardized to a common data model that more smartly manages and shares research methodologies, and expands education in open science and collaboration.

Vision

The European Health Data & Evidence Network (EHDEN) aspires to be the trusted observational research ecosystem to enable **better health decisions, outcomes and care**

Community

Education

Sustainability

Values

Open science

Quality

Inclusiveness

Harmonization

Harmonise in excess of **100 million** anonymised **health records** to the OMOP common data model, supported by an ecosystem of certified SMEs, and technical architecture for a federated network

Evidence

Impact our understanding of, and improvement of, clinical **outcomes for patients** within diverse healthcare systems in the EU

Community

Establish a self-sustaining **open science collaboration** in Europe, supporting academia, industry, regulators, payers, government, NGOs and others

EHDEN'S PREDECESSOR — EMIF

EMIF-Metabolic

Identify predictions of metabolic complications in obesity

EMIF-AD

Identify predictions of Alzheimer's disease in the pre-clinical and prodromal phase

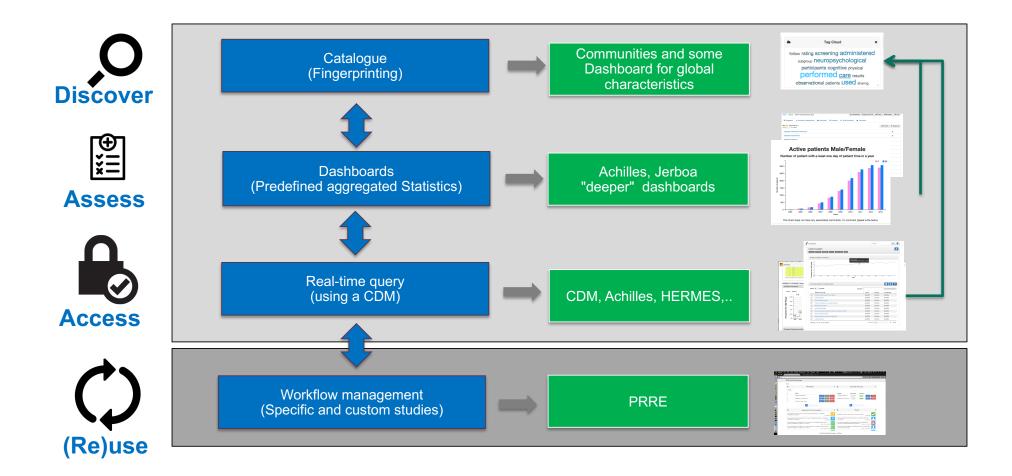

- www.emif.eu
- 14 European countries
- 58 partners
- €56 million worth of resources
- 3 projects in one
- 5 year project (2013 2017)

EMIF-Platform

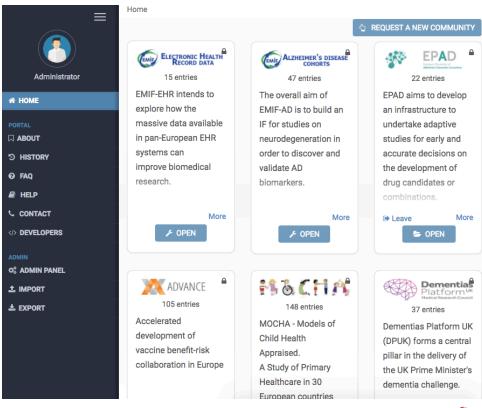

A framework for evaluating, enhancing and providing access to human health data across Europe - support research using human data in general.

EMIF PLATFORM

EMIF PLATFORM

- www.emif-catalogue.eu
- 9 communities
- 825 users
- 490 databases
- data from more than 40 million subjects from 6 EU countries
- 60,000 subjects in AD cohorts
- 94,000 subjects in metabolic cohorts

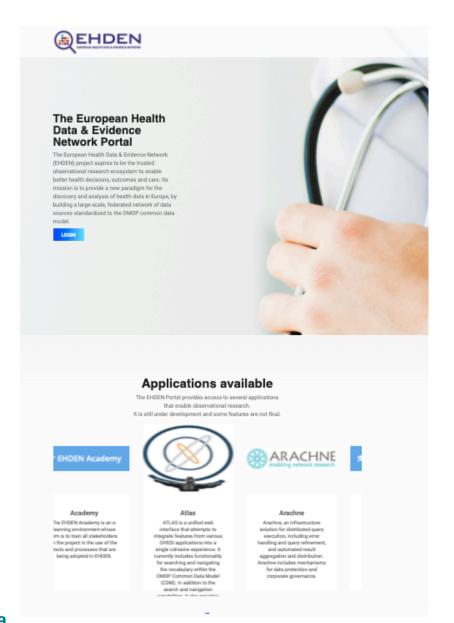

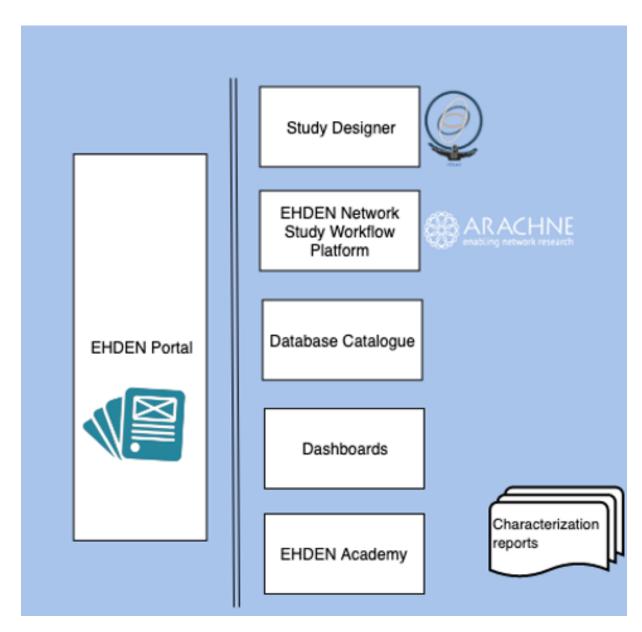

MONTRA ARCHITECTURE

- MONTRA¹ was planned as a Rapid Application Development system to allow fast deployment for a specific use case.
- Thinking of a data skeleton as a questionnaire, we have implemented a schema that contains questions and answers about one or more data entities.
- Within the data catalogue created with a given schema CRUD operations are automatically available for registered users.
- It supports third-party components and allows users, with adequate permissions, to extend its functionalities without having to deal with its base code (plugins).
