on behalf of OHDSI community

Agenda

- Welcome - FDA/RUF team - 5 min
 - OHDSI community overview - Patrick
 - Characterization of patients hospitalized with COVID-19- Dani
 - Prediction of COVID outcomes in symptomatic patients- Ross
 - Project CHARYBDIS: Large-scale disease natural history of COVID progression- Talita
 - Q&A - All - 15 min
-

OHDSI: a global open science community

OHDSI Collaborators:

- 2,770 users
- 25 workgroups
- 18,700 posts on 3,250 topics

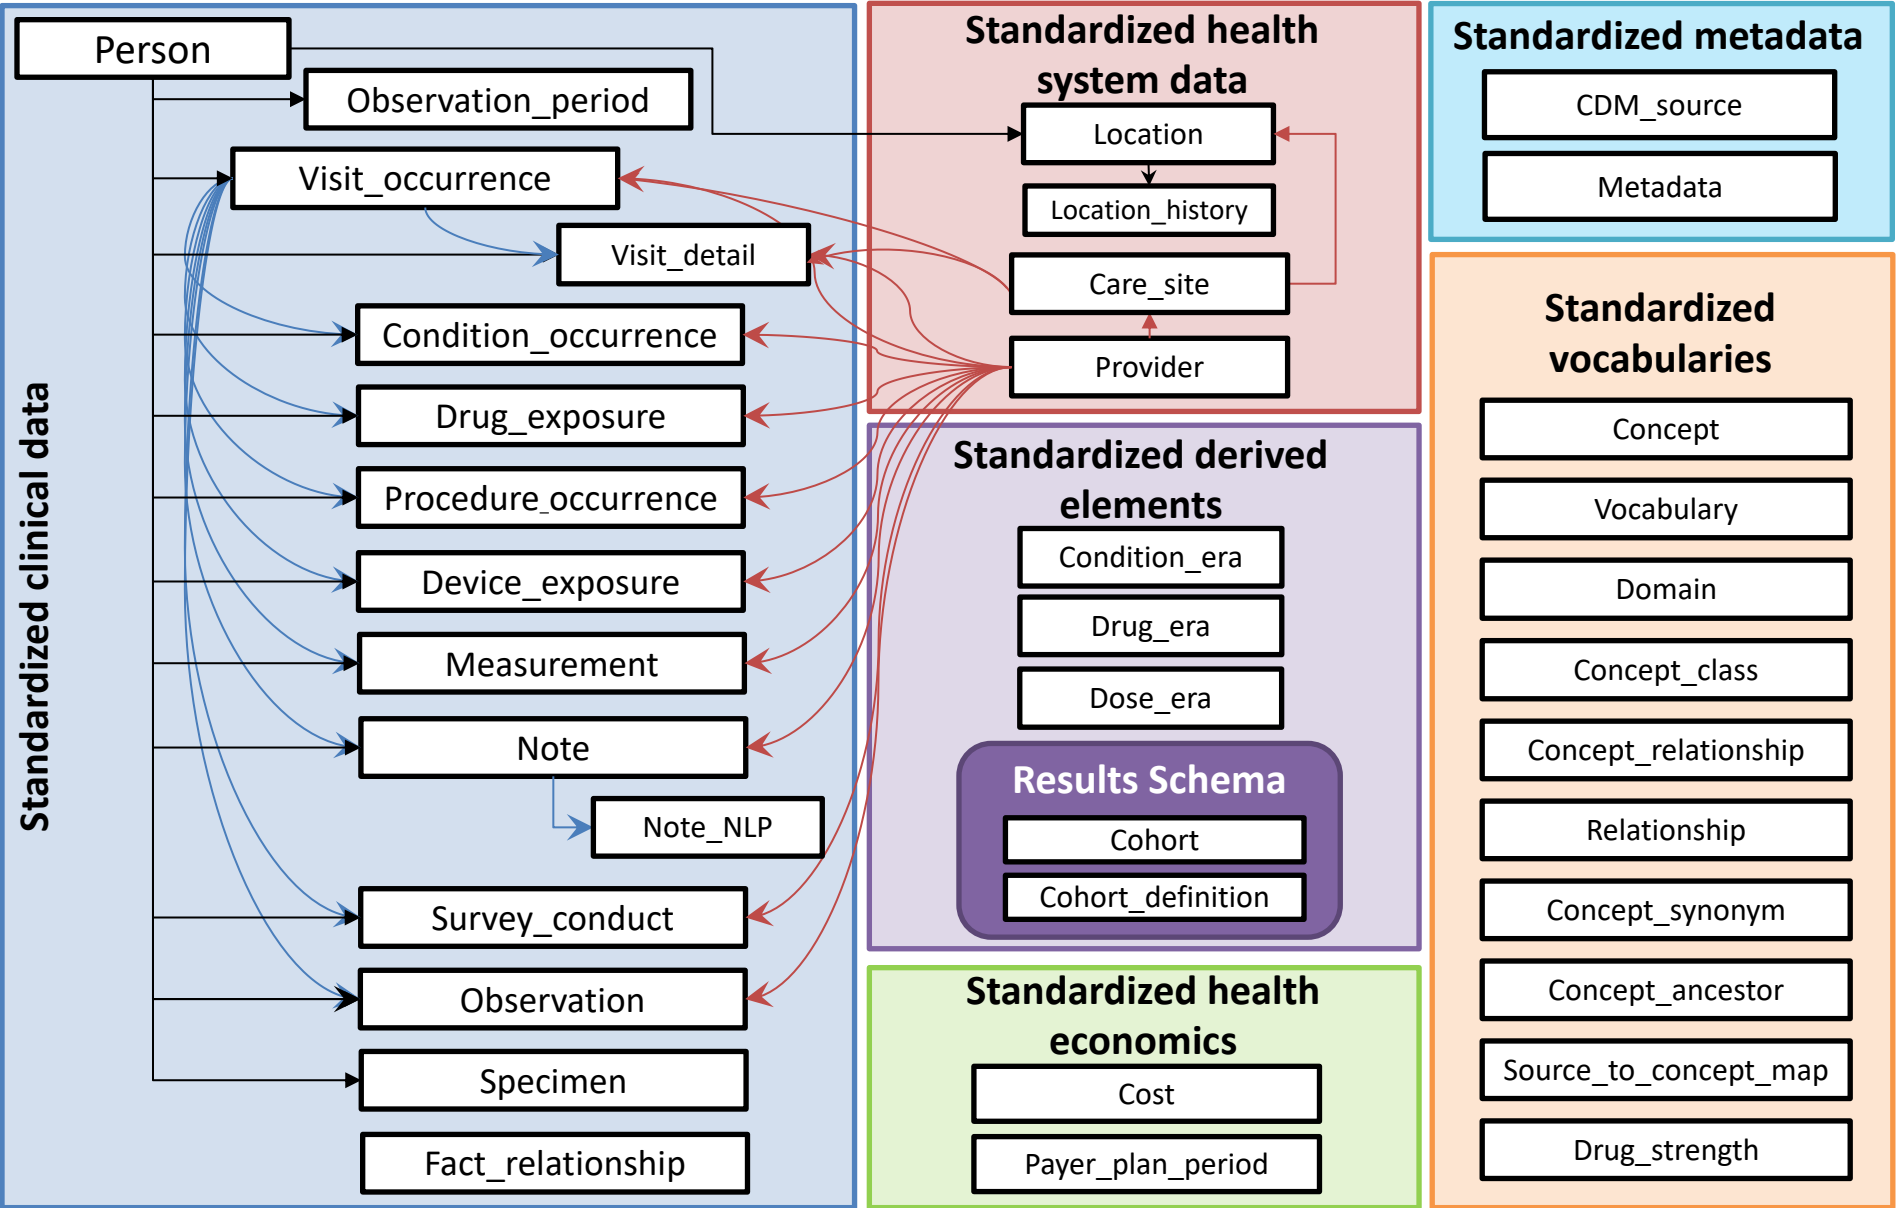

OHDSI Network:

- 152 databases
- 18 countries
- approx. 600M patient records

OHDSI's Mission: To improve health by empowering a community to collaboratively generate the evidence that promotes better health decisions and better care

Open community data standard: OMOP CDM

Complementary evidence to inform the patient journey

COVID-19 Updates Page

The Observational Health Data Sciences and Informatics (OHDSI) international community will host a COVID-19 virtual study-a-thon this week (March 26-29) to inform healthcare decision-making in response to the current global pandemic.

Day 4

Early Call: [Video](#)

Global Call: [Video](#)

FINAL CALL: [Use This Link To Watch Live](#) (regardless of whether you registered)

Please take a look at the early calls, but we're going to save the exciting study-a-thon updates for our final call tonight! [This link will work for anybody](#), regardless of whether you registered for the study-a-thon. We are so excited to share our studies and early results with the world. Please share this link with people in your networks, so they can see the power of global collaboration in the OHDSI community.

Day 3 Updates

What have we done?

In only **88** hours, we have:

- Convened **351** participants brought together from **30** countries
- Held **12** Global Huddles, **>100** collaborator calls, **>13,000** chat messages
- Engaged **15** concurrent channels
- Reviewed **>10,000** publications
- Drafted **9** protocols
- Released **13** study packages
- Designed **355** cohort definitions
- Assembled a distributed data network with **37** partners signed on to execute studies

<https://www.ohdsi.org/covid-19-updates/>

3 things that we did in 4 days together that nobody has ever done before

- First large-scale characterization of COVID patients in US and Asia
- First prediction model externally validated on COVID patients to support triage to 'flatten the curve'
- Largest study ever conducted on the safety of hydroxychloroquine

Open collaboration requires FULL transparency in every step of the research process

- Study registered in ENCEPP with full protocol posted:
<http://www.encepp.eu/encepp/viewResource.htm?id=34498>
- Phenotype definitions and analysis specifications are both human-readable and computer-executable using ATLAS against any OMOP CDM:
<https://atlas.ohdsi.org/#/estimation/cca/6>
- Analysis source code freely available and directly downloadable:
<https://github.com/ohdsi-studies/Covid19EstimationHydroxychloroquine>
- Manuscript posted on Medrxiv while awaiting peer-review:
<https://www.medrxiv.org/content/10.1101/2020.04.08.20054551v1>
- All analysis results available for public exploration through interactive R shiny application:
<http://evidence.ohdsi.org/Covid19EstimationHydroxychloroquine>

An international characterisation of patients hospitalised with COVID-19 and a comparison with those previously hospitalised with influenza

Prof Dani Prieto-Alhambra
University of Oxford

Open collaboration requires FULL transparency in every step of the research process

- Protocol and analysis source code freely available and directly downloadable:
<https://github.com/ohdsi-studies/Covid19HospitalizationCharacterization>
- Phenotype definitions are both human-readable and computer-executable using ATLAS against any OMOP CDM:
<https://atlas.ohdsi.org/>
- Manuscript posted on Medrxiv while awaiting peer-review:
<https://www.medrxiv.org/content/10.1101/2020.04.22.20074336v1>
- All analysis results available for public exploration through interactive R shiny application:
<http://evidence.ohdsi.org/Covid19CharacterizationHospitalization/>
- The study is a living evidence repository: any data partners can execute analysis and share aggregate results at any point, including updates as data accumulate

KEY FINDINGS

- 26,074 (US: 2,477, South Korea: 5,172, Spain: 18,425) included
- 49,331 summary characteristics extracted, summarised in an interactive web app (next slides)

Abrahao, Amanda Alberga, Heba Alghoul, Osaid Alser, Thamir M Alshammari, Carlos Areia, Juan M Banda, Jaehyeong Cho, Aedin C Culhane, Alexander Davydov, Frank J DeFalco, Talita Duarte-Salles, Scott L DuVall, Thomas Falconer, Weihua Gao, Asieh Golozar, Jill Hardin, George Hripcsak, Vojtech Huser, Hokyun Jeon, Yonghua Jing, Chi Young Jung, Benjamin Skov Kaas-Hansen, Denys Kaduk, Seamus Kent, Yeeseuk Kim, Spyros Kolovos, Jennifer Lane, Hyejin Lee, Kristine E. Lynch, Rupa Makadia, Michael E. Matheny, Paras Mehta, Daniel R. Morales, Karthik Natarajan, Fredrik Nyberg, Anna Ostropolets, Rae Woong Park, Jimyung Park, Jose D. Posada, Albert Prats-Urbe, Gowtham A. Rao, Christian Reich, Yeunsook Rho, Peter Rijnbeek, Selva Muthu Kumaran Sathappan, Lisa M. Schilling, Martijn Schuemie, Nigam H. Shah, Azza Shoaibi, Seokyoung Song, Matthew Spotnitz, Marc A. Suchard, Joel Swerdel, David Vizcaya, Salvatore Volpe, Haini Wen, Andrew E Williams, Belay B Yimer, Lin Zhang, Oleg Zhuk, Daniel Prieto-Alhambra, Patrick Ryan
doi: <https://doi.org/10.1101/2020.04.22.20074336>

This article is a preprint and has not been peer-reviewed [what does this mean?]. It reports new medical research that has yet to be evaluated and so should not be used to guide clinical practice.

KEY FINDINGS (2)

- 26,074 COVID19 admitted patients from 3 continents
 - US: 2,477
 - South Korea: 5,172
 - Spain: 18,425
- 49,331 summary characteristics extracted, summarised in an interactive web app (next slides)

KEY FINDINGS (3)

- Patients were majority male in the US (VA OMOP: 94%, STARR-OMOP: 57%, CUIMC: 52%) and Spain (SIDIAP: 54%, HM: 60%)
- ... but majority female in South Korea (HIRA: 56%).
- Age profiles varied across data sources.

KEY FINDINGS (4)

- COVID is no flu
- Healthier
- Less drug usage
- Exceptions
obesity,
diabetes, OA

Characterizing Health Associated Risks, and Your Baseline Disease In SARS-COV-2 (CHARYBDIS)

Talita Duarte-Salles

 #OHDSICOVID19

Characterization Study Group

CHARYBDIS – Aims

- 1) Describe the baseline demographic, clinical characteristics, treatments and outcomes of interest among individuals with COVID-19 overall and stratified by sex, age and specific comorbidities
 - 2) Describe characteristics and outcomes of influenza patients between September 2017 and April 2018 compared to the COVID-19 population
-

Characterizing Health Associated Risks, and Your Baseline Disease In SARS-COV-2 (CHARYBDIS)

Study Status Started

- Analytics use case(s): **Characterization**
- Study type: **Clinical Application**
- Tags: **OHDSI, Study-a-thon, COVID-19**
- Study lead: **Talita Duarte-Salles, Kristin Kostka, Albert Prats-Urbe**
- Study lead forums tag: [tduarte](#), [krfeeney](#), [Albert_Prats](#)
- Study start date: **April 21, 2020**
- Study end date: **Mid-June 2020**
- Protocol: [Word Doc](#)
- Publications: -
- Results explorer: -

Objectives: 1) Describe the baseline demographic, clinical characteristics, treatments and outcomes of interest among individuals tested for SARS-CoV-2 and/or diagnosed with COVID-19 overall and stratified by sex, age and specific comorbidities; 2) Describe characteristics and outcomes of hospitalized influenza patients between September 2017 and April 2018 compared to the COVID-19 population.
