

Covid-19 pandemic impacts on mental health related conditions via multi-database network: a longitudinal observational study (CERVELLO)

Carmen Olga Torre, MSc; Hao Luo, PhD; Kenneth Man, PhD; Wallis Lau, PhD; Prof. Ian CK Wong, PhD

Objectives:

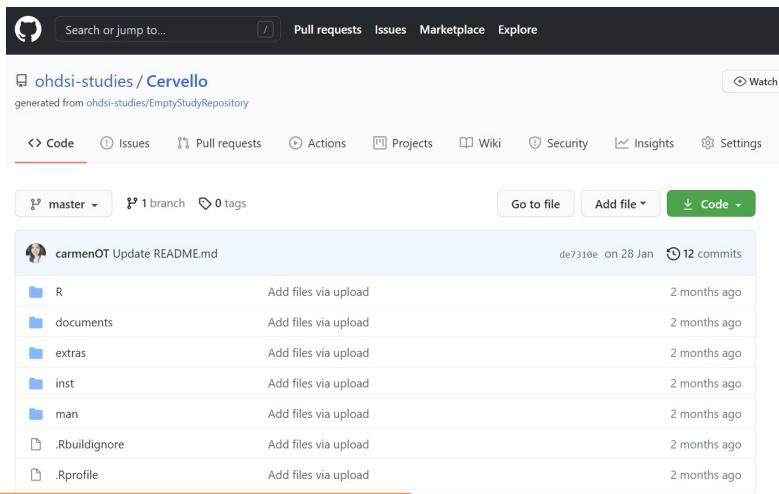

- 1 Characterize individuals with mental health conditions before the COVID-19 pandemic
- 2 Obtain the prevalence in use of psychotropic drug in people with existing mental health issues and neurodevelopmental disorders before and during the pandemic.

Cohorts of interest

- 1) Anxiety disorders
- 2) Depression
- 3) Bipolar disorders
- 4) Non-affective psychoses
- 5) Personality disorders
- 6) Alcohol misuse or dependence
- 7) Substance misuse or dependence
- 8) Dementia
- 9) Attention-deficit/hyperactivity disorder (ADHD)
- 10) Autism and other neurodevelopmental disorders

Visualization

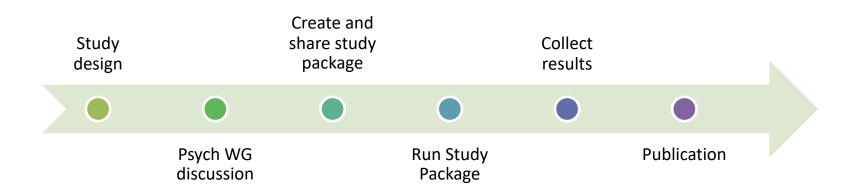

Next steps:

Obtain the prevalence of psychotropic drug in people with existing mental health issues and neurodevelopmental disorders before and during the pandemic:

- 8 types of psychotropic drugs
- Stratified by year before the pandemic
- by month during the pandemic
- stratified by age groups
