Introduction

- This study introduces the <u>near real-time</u> incremental <u>OMOP-CDM</u> <u>ETL</u> (hereafter, NRT ETL) system.
- This NRT ETL system will broaden the research scope of OMOP-CDM to the studies requiring up-to-date data, such as COVID-19 studies or prospective pragmatic clinical trials studies.

Strategies for NRT ETL

 We established the following NRT ETL strategies in advance.

•	
Items	Desc.
ETL cycle	Daily or weekly or monthly
Data scope	Incremented data since the last (full / near real-time) ETL
Data sync. strategy	Full ETL in a year cycle + near real-time ETL
Concept mapping strategy	Major mapping in a year cycle + minor mapping in a quarter cycle
Backup strategy	Archiving the latest three CDM versions

NRT ETL System Development

ETL System Architecture

- The NRT ETL system was developed using <u>open-source softwares</u> such as Digdag, Embulk, Spark, Drill, Parquet, which enhance system scalability.
- From original data to final CDM data, <u>four</u> <u>intermediate staging files</u> were produced:
- 1) ODS: original loaded data
- 2) Interface: column mapped data
- 3) Intermediate: meta code mapped data
- 4) CDM: medical code mapped data

NRT ETL System

 We <u>improved the ETL system</u> to support NRT ETL by sophisticating the following modules.

- 1) Extraction of original data
- : Using change data capture (CDC) or [BETWEEN] query for the [DATE] column, we captured incremented data

ATLAS

(CDM 분석 엔진)

EMR

Data Source

- 2) Synchronization of [person_id]
- : With a derived list of changed person_id, we synchronized ODS file and CDM DB, and executed the ETL process

ETL System Architecture

Embulk

(Bulk Loader)

DODashboard

CDM

Digdag

(Workflow Engine)

ODS Files

(Parquet)

Interface Files

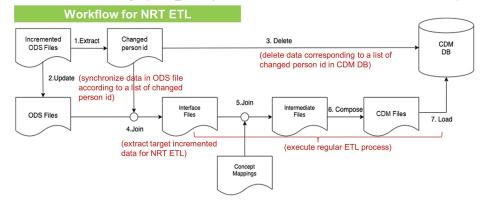

(Parquet)

(Parquet)

CDM Files

Apache Drill (Schema-free SQL Query Engine) Spark

(ETL Engine)

Results & Conclusion

- We developed the NRT ETL system using Ajou university hospital CDM, which has an Oracle CDC software.
- Currently, NRT ETL system was successfully applied in 11 hospitals (in green ba
- <u>ckground</u>) and is under development in
 12 hospitals in South Korea as of

Hospitals of NRT ETL System		
Chonnam National Univ. Hospital *	Chonnam National Univ. Hwansun Hospital *	
Daegu Catholic Univ. Medical Center *	Dankook Univ. Hospital *	
Gangwon National Univ. Hospital *	Kungpook National Univ. Chilgok Hospital *	
Kyung Hee Univ. Hospital at Gangdong *	Kyungpook National Univ. Hospital *	
Myongji Hospital *	Wonkwang Univ. Hospital *	
Wonju Serverance Christian Hospital *	Ajou Univ. Hospital	
Bucheon Sejong Hospital	Ewha Womans Univ. Mokdong Hospital	
Ewha Womans Univ. Seoul Hospital	Incheon Sejong Hospital	
Kangbuk Samsung Hospital	Kyung Hee Univ. Medical Center	
National Health Insurance Service Ilsan Hospital	Soon Chun Hyang Univ. Hospital Bucheon	
Soon Chun Hyang Univ. Hospital Cheonan	Soon Chun Hyang Univ. Hospital Gumi	
Soon Chun Hyang Univ. Hospital Seoul
