

APAC Community Call

Training Session #4

May 18, 2023

Agenda

- OHDSI News
 - Vocabulary Landscape Assessment Results
 - New Community Dashboard
 - DevCon 2023
- Training Session #4
 - A*STAR Data Vault: a research platform for the Singapore ecosystem and beyond by Mukkesh Kumar and Cindy Ho

Vocabulary Landscape Assessment Results

- Community survey on the current status of OMOP standardized vocabularies was conducted early 2023
- Results from the survey were announced this month, full report is available at [Landscape Assessment Report Final.docx](#)

3. Executive Summary

We received 183 responses from community members and information about 60 data sources around the globe and talked to package maintainers and working groups. Overall, 87% of the community feels confident about Vocabularies' integrity.

The most commonly used vocabularies were SNOMED, CPT4, HCPCS, LOINC, RxNorm, ATC, CVX, ICD family, and ICDO3. However, more efforts are needed to establish an external contribution pipeline for timely inclusion of source vocabularies and coding schemes into the Vocabularies.

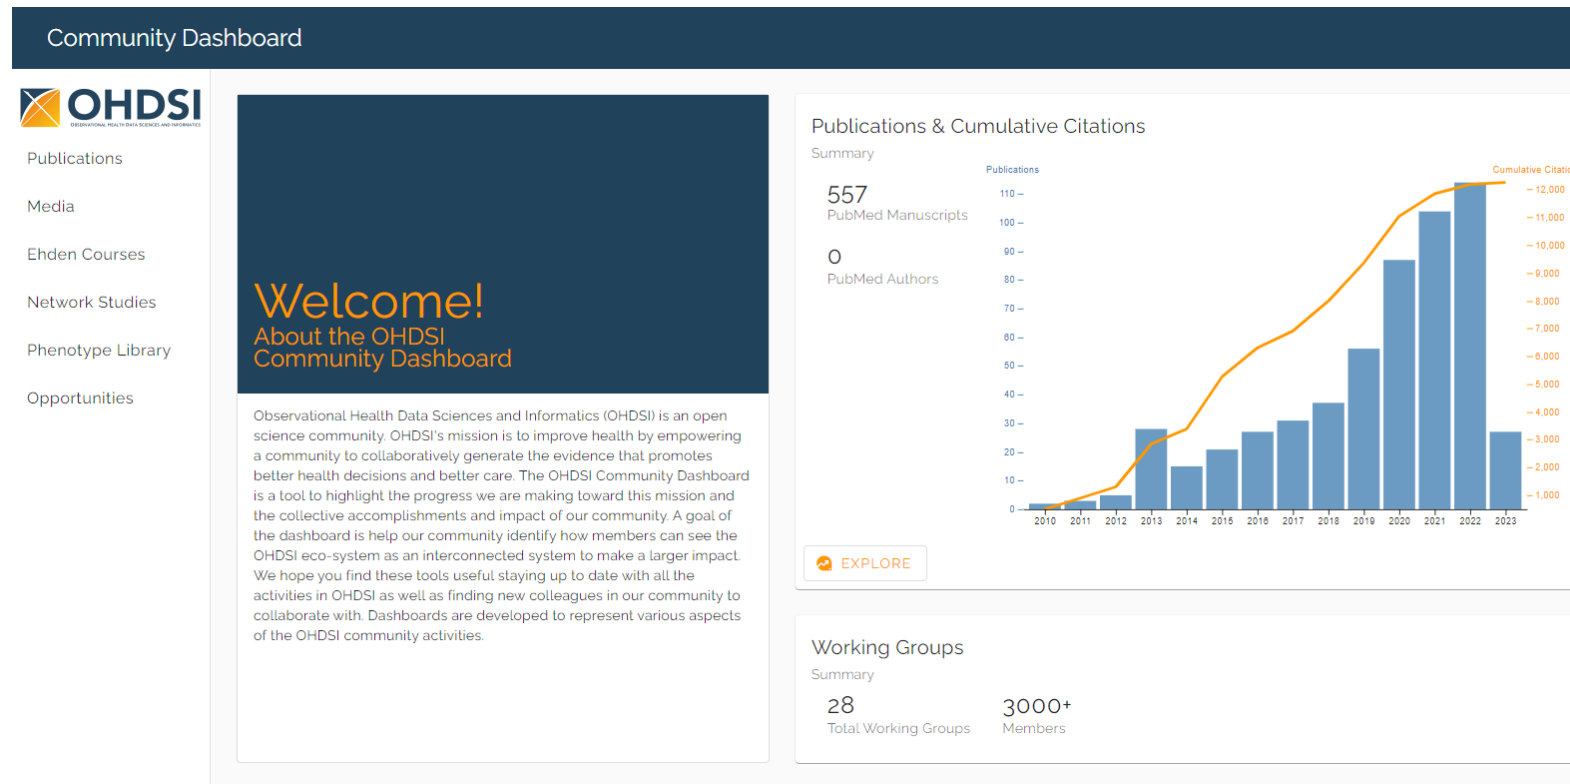

Main errors in the Vocabularies content reported by the community include erroneous mappings, uphill mappings, unclear domain assignment and gaps in hierarchies.

The OHDSI community is interested in an ability to download a given version of the Vocabularies and project the impact of the changes across versions on research and ETL tasks. The common data and Vocabularies refresh in the community follows an annual or semi-annual cycle, but there is a high variation of the Vocabularies versions across the community, which may complicate network studies. The community also expressed a need for easily digestible documentation showcasing real-world Vocabularies' use cases, transparent roadmap, and impact of the releases and changes on ETL and research, and more details regarding specific vocabularies development and quality assurance.

New Community Dashboard

- New community dashboard now LIVE at [https://dash.ohdsi.org/!](https://dash.ohdsi.org/)
 - Includes tracking sites for publications, YouTube videos, EH DEN Academy courses, network studies, the phenotype explorer, and opportunities

DevCon 2023

- Recordings are now available at <https://www.ohdsi.org/devcon2023/>

Training Session #4

A*STAR Data Vault: a research platform for the
Singapore ecosystem and beyond

By Mukkesh Kumar and Cindy Ho

A*STAR DATA VAULT: A RESEARCH PLATFORM FOR THE SINGAPORE ECOSYSTEM AND BEYOND

Mukkuh Kumar, Cindy Ho

Singapore

18th May 2023

Mukkesk Kumar

Dr Mukkesk Kumar is the Head of Data Management Platform at A*STAR, leading the Clinical Data Management, Clinical Data Curation & Data Stewardship, Clinical Data Analytics & Reporting, CDMS/EDC Administration and Healthcare Software Development teams. Dr Mukkesk Kumar is a PhD alumnus of the NUS Saw Swee Hock School of Public Health, he has developed a predictive care framework for diabetes & maternal health, combining coalitional game theory concepts with machine learning. Working in close partnership with Singapore's Ministry of Health (MOH), Dr Mukkesk Kumar is developing the core OMOP data curation team at A*STAR to support MOH-TRUST Strategic Research Data Contributors.

Cindy Ho

Ms Cindy Ho is a Statistician at A*STAR, leading the data curation and data stewardship of population health studies. Ms Cindy Ho's abstract on 'GUSTO Data Vault: Working Towards OMOP Data Standardization' was showcased at OHDSI APAC Symposium 2022 in Taiwan. She has pioneered the OMOP data curation efforts for Growing Up in Singapore Towards healthy Outcomes (GUSTO) cohort study and is developing the OMOP Data Catalogue module to be integrated within GUSTO Data Vault platform for OMOP-based research. Ms Cindy Ho graduated with a major in Statistics from the NUS Department of Statistics, with domain expertise in cardiometabolic diseases.

Growing Up in Singapore Towards healthy Outcomes (GUSTO) study is a major collaborative research effort involving partners across Singapore from healthcare and research alike. This includes the National University of Singapore (NUS), KK Women's and Children's Hospital (KKH), and A*STAR's Singapore Institute for Clinical Sciences (SICS). The purpose of GUSTO cohort study is to understand how conditions in pregnancy and early childhood influence the subsequent health and development of women and children.

GUSTO Data Vault was Showcased at OHDSI APAC Symposium 2022, Taiwan

GUSTO Data Vault: Working Towards OMOP Data Standardization
 PRESENTERS: **Cindy Ho, Mukkesh Kumar**

INTRO

- Growing Up in Singapore Towards healthy Outcomes (GUSTO) aims to understand how conditions in pregnancy and early childhood influence the subsequent health and development of women and children.
- The GUSTO Data Vault platform have advanced data exploration capabilities for research data, biospecimens and publications asset management.

METHODS

- Data Vault (containerized web application with Docker) was built using PostgreSQL database and Django framework.
- Tools used: HTML, CSS, JQuery, Ajax, Python, Plotly Dash, Dashboard engine in Dash Enterprise.

RESULTS

- GUSTO Data Vault platform showcases data across Demographics, Women's Health, Children's Health, Metabolic, Neurodevelopment, Imaging and Omics domains.
- Researchers can browse and discover curated datasets and use the data visualizations to aid with hypothesis construction/discoveries.
- Applicants can submit their data access request to the GUSTO executive committee for approval, after exploring the Data Vault platform.
- Data Vault is refreshed with data updates about every 4 months.
- Data Vault sees around 5,500 unique visitors in a year, mostly from Singapore, with 20% based in countries across Asia, Australia, Europe, and North America.

Applying the **FAIR** (Findable, Accessible, Interoperable, Reusability) data principles, an *open interactive platform (GUSTO Data Vault)* was created using *open-source technologies* for population health studies.

Global Impact of GUSTO Data Vault

Data Vault sees around 5,500 unique visitors in a year (56% of new users), mostly from Singapore, with 20% based in countries across Asia, Australia, Europe and North America.

GUSTO Data Vault is engaging research communities and furthering global research.

COUNTRY/REGION	NUMBER OF USERS	%
Singapore	4515	80.38
United States	289	5.15
Canada	124	2.21
United Kingdom	118	2.1
Indonesia	90	1.6
Australia	73	1.3
India	44	0.78
China	36	0.64
Malaysia	29	0.52
Japan	26	0.46

OMOP Data Catalogue

GUSTO OMOP Data Conversion Journey

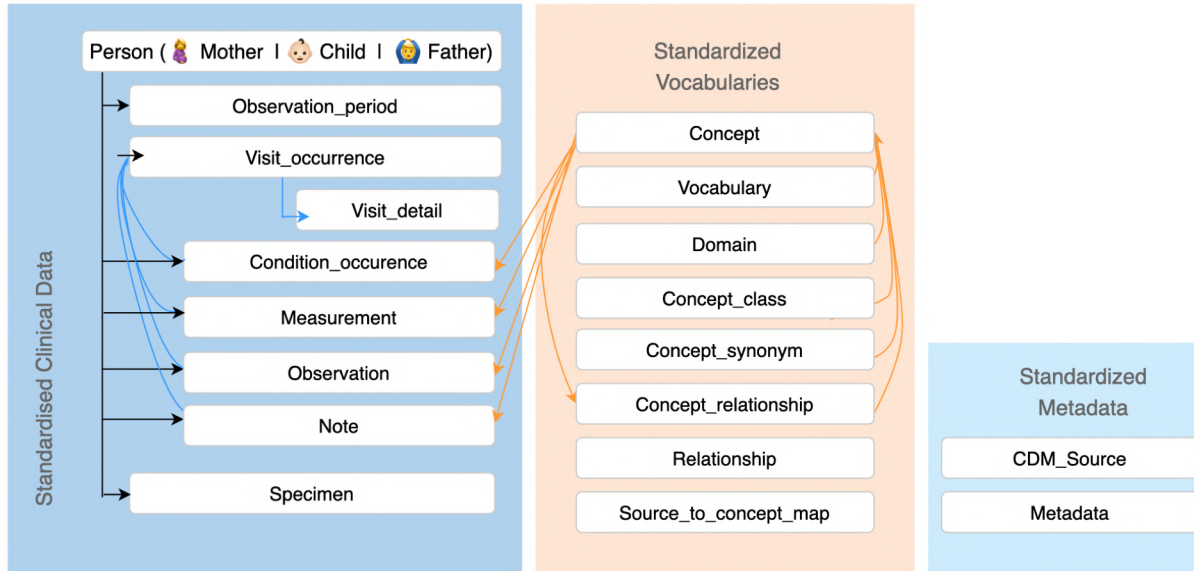

- WhiteRabbit, Rabbit-in-a-hat
- Athena
- Customised R scripts
- IQVIA OMOP Converter

CDM Version & Fields/Tables

- CDM v5.4

GUSTO domains:

- *Demographics*
- *Metabolic*
- *Women's Health*
- *Child's Health*
- *Neurodevelopment/Mental Health*
- *Imaging*
- *Omics*

Some Issues and Challenges Faced

- A lot of manual work
- Variables too specific/too broad
- Mapped to 2 concepts
 - *E.g. Has your child ever been diagnosed with bronchiolitis/bronchitis?*
- Specific categories for some variables
 - *E.g. How often have you done moderate exercise?*
 - Never, Once every 2-3 months, Once a month, Once a fortnight, 1-2 times per week, 3-6 times per week, Once a day, More than once a day

Clinical Data

Person

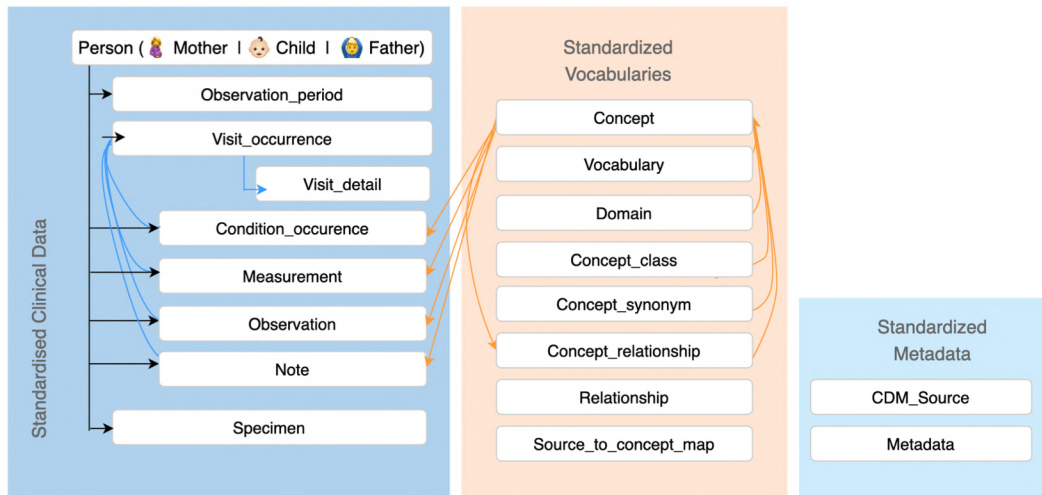

Condition

Observation

Measurement

The OMOP Data Catalogue showcases the GUSTO data assets which have been converted into Observational Medical Outcomes Partnership (OMOP) Common Data Model (CDM) format. OMOP CDM is an open community data standard, designed to standardise the structure and content of observational data. The harmonisation of data using OMOP CDM enables systematic and collaborative OMOP-based research. The current CDM version is **CDM v5.4**, as depicted below for GUSTO tables and fields

Singapore's National Level OMOP Data Curation Team

National Level OMOP Mapping

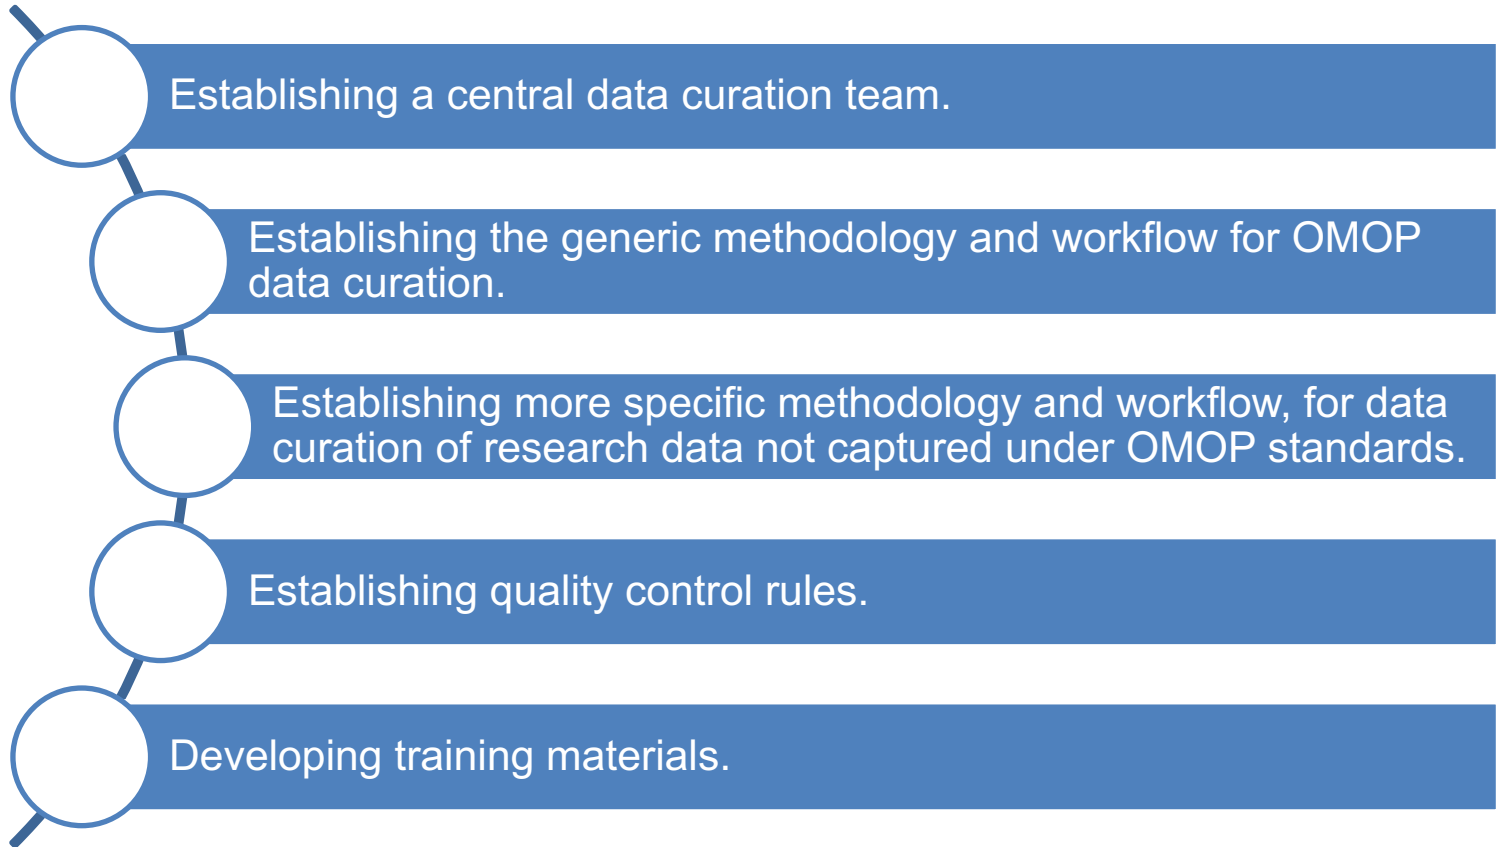

Trusted Research and Real world-data Utilisation and Sharing Tech (“TRUST”) is Singapore’s national health-related data exchange platform that can facilitate safe and secure sharing and usage of anonymised health-related research and real-world data between public institutions, and between the public and private sectors to improve health outcomes.

TRUST has selected the OMOP-CDM model as the data standard for Clinical data.

A*STAR and MOH are collaborating with the aim of setting up a central data curation team to support TRUST Strategic Research Data Contributors (e.g. GUSTO).
