IR assessment	

Objective: To address the growing need for effective data reuse in health research, healthcare institutions need to make their data Findable, Accessible, Interoperable, and Reusable (FAIR). A prevailing method to model data bases for interoperability is the Observational Medical Outcomes Partnership (OMOP) Common Data Model (CDM), developed by the Observational Health Data Sciences and Informatics (OHDS) initiative. A European repository for OMOP CDM-converted databases called the "European Health Data & Evidence Network (EHDEN) portal" was developed, aiming to make these databases Findable and Accessible. This paper aims to assess the FAIRness of databases on the EHDEN portal.

Materials and methods: Two researchers involved in the OMOP CDM conversion of separate Dutch Intensive Care Unit (ICU) research databases each manually assessed their own database using seventeen metrics. These were defined by the FAIRsFAIR project as a list of minimum requirements for a database to be FAIR. Each metric is given a score from zero to four based on how well the database adheres to the metric. The maximum score for each metric varies from one to four based on the importance of the metric.

Results: Fourteen out of the seventeen metrics were unanimously rated: seven were rated the highest score, one was rated half of the highest score, and five were rated the lowest score. The remaining three metrics were assessed differently for the two use cases. The total scores achieved were 15.5 and 12 out of a maximum of 25. *Conclusion*: The main omissions in supporting FAIRness were the lack of globally unique identifiers such as Uniform Resource Identifiers (URIs) in the OMOP CDM and the lack of metadata standardization and linkage in the EHDEN portal. By implementing these in future updates, the EHDEN portal can be more FAIR.

1. Introduction

Analytics, big data, and artificial intelligence have played a significant role in the development of health care in the twenty-first century, improving the efficiency, quality, and safety of care [1–4]. Although these advancements have been supported by an increasing amount of digital health data and more powerful computer systems, more progress could be made if health data were standardized and accessible for analysis.

Reusability (FAIR). Study data should be easily found (F) online so researchers can easily increase the size of their cohorts. This data should somehow be accessible (A) to anyone who finds it, though it may incorporate authentication and authorization procedures. When obtained, the data should be unambiguously understood and merged with other data, hence interoperable (I), with a minimum of technical work or harmonization. Lastly, data should be described with rich metadata. This means that not only should the meaning and context of data be made clear with detailed descriptions, but also the provenance and

OHDSI Shoutouts!

Any shoutouts from the community? Please share and help promote and celebrate OHDSI work!

Do you have anything you want to share? Please send to <u>sachson@ohdsi.org</u> so we can highlight during this call and on our social channels. Let's work together to promote the collaborative work happening in OHDSI!

Collaborator Showcase Deadline: June 16, 8 pm EST

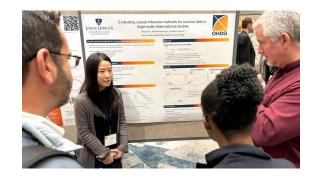

10 DAYS Remaining!

All brief report submissions for the 2023 Global Symposium (Oct. 20-22, East Brunswick, NJ, USA) are due June 16.

We had a record-setting number of submissions in 2022 and are EXTENDING the collaborator showcase this year!

www.ohdsi.org

Collaborator Spotlight: Mengling 'Mornin' Feng

Collaborator Spotlight: Mengling 'Mornin' Feng

Previous Collaborator Spotlights

Mengling 'Mornin' Feng is an Assistant Professor at the National University of Singapore and the Assistant Director of Research (Healthcare) at the Institute of Data Science. He has several research interests, including artificial intelligence solutions for healthcare challenges, causal inference for evidence-based medicine, and deep learning models for medical image analysis.

Mornin has been an OHDSI leader in helping to spread the community to the Asia-Pacific region. He is the chair of the Singapore Chapter, and recently helped develop a collaboration with the Singapore Ministry of Health that has led the Ministry to use the OMOP CDM as the main platform for research.

In the latest edition of the Collaborator Spotlight, Mornin discusses his professional journey, how he connected with OHDSI, recent developments within the Singapore and APAC regions, and plenty more.

Can you discuss your professional journey, and what are your current research interests?

I started my research in data mining and machine learning during my PhD study. After that, I was fortunate to have an opportunity to work as a post-doc under the Harvard-MIT Health Science Technology program. During my post-doc, I was exposed to the cross-disciplinary research of developing machine learning models to analyze healthcare data. Instantly, I was attracted by the unique challenges and also the promising potential of this cross-disciplinary field. As a result, when I returned to Singapore in 2016, I joined the National University of Singapore faculty and started my Healthcare AI lab. My lab now has about 20 PhD students and researchers. Our research mainly focuses on three domains: 1) computer vision technologies customized for medical images; 2) reinforcement learning for treatment recommendation; and 3) natural language processing methods for clinical text understanding.

Despite being a technical lab, we collaborate closely with local and international physicians. All our projects are motivated by real and pressing clinical needs, and they are also developed with real-world clinical data.

How did you first find OHDSI, and what inspired you to work with the community?

I began my journey with OHDSI in 2018. At that time, I was looking for a suitable solution for clinical data standardization and federated analysis for Singapore. I met Rae Woong Park from Ajou University at a conference and learned that he was the pioneer in clinical data standardization in South Korea. We chatted for hours about how his team has successfully implemented the OMOP CDM as the standard data schema for research clinical data and how that may have accelerated the clinical research in Korea. Inspired by his success, I started to learn more about

OHDSI June Newsletter Is Available

The Journey Newsletter (June 2023)

Calling all collaborators! The deadline to submit your brief reports for the 2023 Global Symposium Collaborator Spotlight is **Friday, June 16 at 8 pm EST**. We have all the information in this newsletter, as well as updates on the European and Asia-Pacific Symposiums, the SOS Challenge, 20 new publications from the community, and plenty more! **#JoinTheJourney**

OHDSI Videocast: June Updates

In the latest On The Journey video, Patrick Ryan and Craig Sachson discuss the 2023 Collaborator Showcase and the upcoming submission deadline. They also look ahead at the European and Asia-Pacific Symposiums, both of which will be held in July, and they reflect on lessons learned from SOS Challenge. (*if video does not appear, click 'view this email in your browser*)

Community Updates

Where Have We Been?

The SOS Challenge tutorials have concluded, and more than 16 hours worth of educational content about leading (or participating in) an OHDSI network study are now available on the event homepage. Studies are ongoing, so please join our teams to help answer these clinical questions.
Anna Ostropolets shared the final version of the <u>OHDSI Standardized</u> Vocabularies Assessment. One of the goals of this community activity was to create a more transparent and reliable release cycle. Please join our June 6 community call for a full session on OHDSI vocabularies.
Congratulations to OHDSI veteran Thamir Alshammari on earning the distinction of being one of the 15 new ISPE fellows for 2023. The new Fellows will be officially inducted at the Annual Members' Meeting & Awards Ceremony scheduled for Saturday, August 26th at the Halifax Convention Center, Halifax, Nova Scotia, Canada.

 New jobs and PhD opportunities were shared during May. Please visit our <u>This Week in OHDSI</u> page to learn more about openings throughout our community.

Where Are We Now?

• The OHDSI 2023 Global Symposium collaborator showcase deadline is less than three weeks away. All brief reports must be submitted by 8 pm EST on Friday, June 16. More information on the collaborator showcase is available here, and you can use this link to submit your brief report.

The OHDSI India chapter will be hosting its first webinar on "Redefine Indian healthcare with Real-world data and Real-world evidence" on June 14, 2023, from 3-4 pm IST. This webinar will share the latest progress within the RWD/RWE space in India and share how collaboration with the OHDSI India chapter can transform the healthcare management landscape in India. Nicole Pratt, Vikram Patil and Parthiban Sulur will be among the featured speakers. If you are interested, please visit the OHDSI India homepage to register.
The PIONEER team is leading a studyathon June 13-16 in Stockholm, Sweden, with a focus on "Observational health data analysis on the adverse

events of systemic treatment in patients with metastatic hormone-sensitive prostate cancer" and is looking for participation from the OHDSI community, and specifically members of the Oncology WG. This will be a hybrid event so online participation is welcome. If you are interested in learning more, please fill out this form. PIONEER are especially looking for: collaborators with data on metastatic hormone-sensitive prostate cancer already in the OMOP-CDM.

Collaborator Showcase Extended At OHDSI2023; Please Join Us By Submitting Your Brief Reports Before The June 16 Deadline!

The Collaborator Showcase is always one of the most anticipated parts of the year. Once again, we are inviting our community to participate in the Collaborator Showcase for the 2023 OHDSI Global Symposium. Collaborators will have the opportunity to submit their work for poster presentations, oral talks, and software demonstrations.

This year, the collaborator showcase will be extended throughout the weekend, so presenters will have multiple opportunities to share their work!

Topics should align with at least one of OHDSI's strategic areas of focus: • Observational data standards and management

- Open-source analytics development
- Methodological research
- Clinical applications

Redefine Indian Healthcare with Real World data and Real World Evidence

- Wed, Jun 14, 5:30 AM 6:30 AM EDT
- Online event

Details

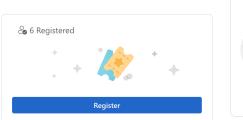

The Observational Health Data Sciences and Informatics (OHDSI) is an open source, open science, multistakeholder and interdisciplinary collaboration to bring out the value of health data through large-scale analytics. OHDSI India Chapter aims to work collaboratively with hospitals, medical universities, and healthcare professionals and researchers to promote the value of real-world data and evidence-based medicine by conducting observational studies using structured Indian patient data.

Agenda and Topic:

- Introduction by Lakshmi Kubendran
- · Potential of Health Data in Research and Treatment by Dr. Vikram Patil
- The OHDSI Journey from Data to reliable Evidence by Professor Nicole Pratt
- OHDSI India Chapter in RWD/RWE Journey by Mr. Parthiban Sulur
- Q&A

Key Takeaways:

- Become a part of the Global Research Community
- Benefits of Structured Healthcare data
- Data Standardization and Anonymization as per International Standards
- Access to 6B Patient Data to Perform Network Studies
- Improving public health using health data analytics

SOS Challenge Studies

The SOS Challenge was introduced in January 2023, and community members submitted 35 different studies that could be run during the challenge. Four were selected from that group, two of which will be done live during the weekly tutorials, and two that will be done asynchronously. You can learn more about each of the four studies below, and each of the pertinent links (GitHub repo, protocol, Teams channel, etc.) will be linked in the proper section.

The OHDSI mission is to improve health by empowering a community to collaboratively generate the evidence that promotes better health decisions and better care. The 2023 Save Our Sisyphus (SOS) Challenge will try to fulfill that Mar. 28

We will be collaborating simultaneously on four studies, each of which will be designed. implemented, executed and disseminated by members of the OHDSI global community.

mission, but not through one study at a time.

As you can see on the right, there will be two weekly tutorials, taught by different members of the community, and featuring two of the four studies

that were voted on by the community. Please join either or both each week to learn every step of executing a network study. The earlier session will take place during the weekly global community call, while the later will take place at 7 pm ET. Weekly call invites will go out for both, or you can access either meeting using the links below

Tenure Track Faculty

#105752

Description

The Department of Biomedical Informatics (DBMI) of Columbia University seeks exceptional junior-level faculty members in the tenure track.

The positions are open to researchers interested in developing and applying informatics theory and achieving tangible benefits to health care and biology. Three particular foci are (1) machine learning for healthcare and health-related data science, (2) health information technologybased interventions to improve health care and the health of individuals and populations, and (3) translational bioinformatics.

Successful Clinical Response

In Pneumonia Treatment

Work as a Research Programmer Analyst (RPA) on a small team to develop, operate, and maintain ETL processes, clinical data warehouses, and associated data products for health research

The RPKs role is multi-faceted, involving domain knowledge (clinical data, research informatics), technical expertise, and communication skills. The RPA will operate, monitor, and enhance existing ETL processes and infrastructure, develop data profiles, perform quality assessments, investigate data anomaines, and createstimaritian related data dictorates. The RPA will operate, monitor, and enhance existing ETL processes and infrastructure, develop data profiles, perform quality assessments, investigate data anomaines, and createstimaritian related data dictorates. The RPA will routinely communicate with researchers, clinicians, data scientista, and other stateholdens to stary and with exercist and investigant data regularity data scientista, and other stateholdens to stary and understand data requerements and annahas them into efficient, vehicumented ETL subclicans.

The RPA will support multiple projects and data assets, including the PCORnet CDM (and related research projects), the UC Health Data Warehouse (UC HDW Operational OMOP), and the "All of Us" Research Program

Responsibilities include, but are not limited to the following:

1. Work closely with researchers, data scientists, and other stakeholders to understand their data requirements and translate them into efficient ETL solutions Develop, Implement, and maintain ETL processes using SSIS and t-SQL stored procedures to extract, transform, and load data from Epic EHR and other sources into common data models like PCORnet CDM and OHDS/Is OMOP

L levelop, imperienti, anti mantaria Li proclesse ungl posisi and S-vul. stere procedures to extract, transiom, and voa data le Esmere data quality and integrity hinogolicular the ETL process by portioning data mapping: transformation, and voa data data O prinzie ETL proclesses for performance, scalability, and reliability, identifying and resolving bottlemeda a needod. So blackard with the mortless to integritoria data form disparate concersa en densus esamesia data for to research purposes. Mantaria un-po-data konoxidege of the healthcare domain, incluring clinical leminologies, worklow, data standards, and regular Andres to data successi for performance scalability and the ender compliance with heaving regularitis data HMA.

Provide (and request) technical support and guidance to (and from) other team members as needed.
 Contribute to project management, setting priorities, and meeting deadlines.

To see the salary range for this position (we recommend that you make a note of the job code and use that to look up); TCS Non-Academic Titles Search (ucco.edu)

Please note: The compensation ranges listed online for trokes not covered by a bargaining unit agreement are very wide, however a job offer will typically fall in the range of 80% - 120% of the established mid-point. An offer will take into consideration the experience of the final candidate AND the current salary level of individuals working at UCSF in a similar role.

For roles covered by a bargaining unit agreement, there will be specific rules about where a new hire would be placed on the range

To learn more about the benefits of working at UCSF, including total compensation, please visit; https://ucnet.universityofcalifornia.edu/compensation-and-benefits/index.htm

Senior Associate Director, Real World Data & Analytics (Remote)-232633

Description:

Job Overview

The purpose of this job is to:

Generate real world evidence (RWE) to support in-line and pipeline products.

 OMOP data model work experience is required. · Experience with clinical data, EHR or pharmaceutical data is required.

- · Provide statistical advice on the analysis of real world data (RWD) to various internal and external stakeholders.
- · Contribute to the RWD acquisition strategy and tool evaluation
- · Participate in the development and presentation of RWE trainings

As an employee of Boehringer Ingelheim, you will actively contribute to the discovery, development and delivery of our products to our patients an customers. Our global presence provides opportunity for all employees to collaborate internationally, offering visibility and opportunity to directly contribute to the companies' success. We realize that our strength and competitive advantage lie with our people. We support our employees in a number of ways to foster a healthy working environment, meaningful work, diversity and inclusion, mobility, networking and work-life balance. Our competitive compensatio and benefit programs reflect Boehringer Ingelheim's high regard for our employees.

Duties & Responsibilities:

 Provide expert advice in the analysis of real world data (such as medical claims, electronic health records, registries) for stakeholders in epidemiology. market access / HEOR, medical affairs, and other functional areas. These analyses may include:

The Successful Clinical Response In Pneumonia Therapy (SCRIPT) Systems Biology Center (SCRIPT) is hiring a postdoctoral fellow to work at the intersection of systems biology and clinical data management. The fellow will collaborate with an interdisciplinary team of clinicians, biologists. geneticists, and data scientists to develop tools to improve the management of multi-faceted data to support systems biology research. Candidates should have strong software skills and an MD or PhD with research experience with Electronic Health Record data. Experience with Common Data Models, such as OMOF CDM from OHDSI, is preferred.

This position is supervised by Dr. Justin Starren and the primary appointment will be in the Division of Health and Biomedical Informatics in the Department of Preventive Medicine. Northwestern has a vibrant Informatics and Data Science research community, with the Institute of Augmented Intelligence in Medicine and AI@NU. We are located in downtown Chicago, which has been voted the best big city in the United States for six years running.
