Electronic healthcare databases in Europe: descriptive analysis of characteristics and potential for use in medicines regulation

A federated network of Data Partners

The EHDEN project aims to collaborate with diverse institutions, data sources and data custodians across the EU, with a goal of harmonising source data to the OMOP common data model locally, within a federated network.

Following the 7 open calls to date we have organised, we currently have 187 Data Partners from 29 different countries which are mapping their data to the OMOP common data model. This includes several EHDEN project partners who have also mapped their data to the OMOP CDM for use in the federated network.

European data standardization from EHDEN
European Initiatives

- HONEUR
- EURACAN
- PIONEER / OPTIMA
National Nodes

- Belgium
- Germany
- Greece
- Italy
- Luxemburg
- Netherlands
- Portugal
- Spain
- United Kingdom
