OHDSI Global News

ATLAS user survey on ConceptSets and Cohort Definitions is due by July 23

Conceptsets and Cohort Definitions are two of the most important and commonly used features within ATLAS Platform.

Development team would like to know the needs of the community about those two features!

Patrick Ryan 오전 10:34

ATLAS user survey on Conceptsets and Cohort Definitions: we need your input

OHDSI friends:

This week, we heard from [Boyce, Richard David \(Guest\)](#) and [Chris Knoll](#) about two important features within ATLAS: conceptsets and cohort definitions. (In case you missed it Tuesday, you can watch the community call [video here](#)). According to our community input from our first survey, these are two of the most important and commonly used features within the ATLAS platform, so it makes sense for it to be a focus for our development team to ensure we're meeting the needs of our community.

Do you use ATLAS? Have you designed and/or cohort definitions in your research? If so, we n

Please take a couple minutes to share your input [survey on conceptsets and cohort definitions](#). we will review your input during next week's me

OHDSI June 2025 Updates

Singapore Chapter

Evelyn Goh

PhD Student

Assoc Prof. Mengling ‘Mornin’ Feng

Director of AI for Public Health

Saw Swee Hock School of Public Health

National University of Singapore

Use of GLP-1 receptor agonists and subsequent risk of acute liver injury

- GLP-1 receptor agonists (GLP-1 RA) increasingly used as treatment for T2DM (and obesity)
- Several case reports have arisen on acute liver injury (ALI) post-GLP-1 RA

Objective: Evaluate risk of ALI in T2DM users of GLP-1 RA

- In patients with T2DM, what are the **risks of ALI incidence** when prescribed with second-line GLP-1 RA compared to other classes of diabetes prescriptions?

Current status

- Wrote/executed one version of code with primary outcome
 - Executed R package across 14 cohorts – 9 cohorts included, primarily from US and Japan
 - No evidence of acute liver injury in those taking GLP1 (compared to DPP4i) !
- Adding new comparators and secondary outcomes to validate
 - New comparators: SGLT2i
 - Secondary outcomes: cholelithiasis, cholecystitis, lab-based values

Recruitment of data partners

- If you have a database, please participate in our study!
 - We especially need **more Asian cohorts**
- Contact Evelyn at e0983111@u.nus.edu

Plans for 2025

- Profession Certificates for OHDSI Training Course
 - In-principal approval by Dean
 - Plan to launch in Aug
 - Exploring potential collaborations with Australia and Taiwan Chapter
 - Keen to collaborate with the other chapters too
- New Master for Modeling, AI and Data Science for Public Health (M.MAD4PH)
 - Our new OHDSI course is one of the mandatory courses

Plans for 2025

- Continue to Support SG national initiatives
- Lead and participate in more APAC and Legend studies
 - GLP1 study
 - And many more
 -
- Help in the next APAC symposium in China

OHDSI India's Strategic Expansion: Aligning with FHIR & ABDM

Strategic Objective

Align OHDSI India's data infrastructure with ABDM (Ayushman Bharat Digital Mission) FHIR standards

Underlying Opportunities

ABDM unlocks access to national health programs and platforms
Enables data monetization, registry licensing, EHR integration
Boosts pharma, med-tech, and health tech collaboration potential
Positions GWV for grants and digital health leadership

Action plan

Develop proof-of-concept linking OMOP CDM with FHIR APIs
Explore collaborations, partnerships and funding opportunities for further development

Vision 2026: Scaling OHDSI India's Impact

Strategic Objectives

Objective 1 - Establish OHDSI India as a national-level thought leader in real-world evidence & health data research

Objective 2 - Expand collaboration with 10+ hospitals, 5+ universities, 5+ pharma and target public health partners

Objective 3 - Launch 3 new disease registries

Execution Strategy

- Promote case studies to showcase India-specific RWE
- Integrate FHIR-ABDM with OHDSI/OMOP frameworks
- Launch ABDM-compliant disease registries
- Drive academic research and joint publications
- Lead trainings and global OHDSI participation
- Propose joint projects, grants, and disease registries for partnership

OHDSI

OBSERVATIONAL HEALTH DATA SCIENCES AND INFORMATICS

Thank You

OHDSI THAILAND Status Update

@ APAC Community Call June 2025

- 5+ Institutions with OMOP CDM data
- 3+ Institutions with ongoing studies
- 7+ Experts showing interests in organizing OHDSI Thailand Chapter (*coming soon*)
- Kicking off Monthly Meetup on Next Thursday 26/6 @ 12:30 – 14:00 (*in Thai*)
 - 1st topic on OMOP ETL Pipeline (SQLMesh) at Siriraj Hospital
 - Then, rotating topics on CDM, Vocab, Research, etc.

OHDSI Korea Chapter Mid-year Update 2025

www.ohdsi-korea.org

Vocabulary Updates in Korea

- **EDI** (Electronic Data Interchange) is a code system of drug, procedure, device and measurement in the Korean national insurance system
- We have **incorporated Korean local EDI vocabularies into OMOP vocabulary**, which is now available on Athena (<https://athena.ohdsi.org>) with **mappings to standard concepts**
- A detailed **step-by-step tutorial for integrating local vocabulary** into the OMOP CDM has also been published on medRxiv.

Integrating Local Vocabulary into OMOP CDM: A Step-by-Step Tutorial Posted May 08, 2025.

Yiju Park, Jinwoo Yoon, Aleh Zhuk, Anna Ostropelets, Seng Chan You
doi: <https://doi.org/10.1101/2025.05.07.25327200>

This article is a preprint and has not been peer-reviewed [what does this mean?]. It reports new medical research that has yet to be evaluated and so should not be used to guide clinical practice.

Abstract Full Text Info/History Metrics Preview PDF

ABSTRACT

Objectives This tutorial provides healthcare informatics researchers with a practical guide for integrating local vocabularies into the Observational Health Data Sciences and Informatics (OHDSI) Standardized Vocabularies, through the example of Korean Electronic Data Interchange (EDI) codes.

Methods We present a step-by-step guide for integrating local vocabulary. The methodology includes four sequential stages: (1) comprehensive and continuous collection system for longitudinal EDI codes from November 2000 to May 2024, (2) mapping to OHDSI Standardized Vocabularies, (3) validation and integration through the OHDSI Community Contribution Pipeline, and (4) publication into the Athena, the official OHDSI vocabulary site.

Results By following this tutorial, researchers can achieve integration of local vocabulary into the OHDSI Vocabularies. Of the total 620,642 EDI codes collected, we successfully integrated 437,807 codes (70.5%) into the OHDSI Vocabularies, with 376,111 (85.9%) of these integrated codes mapped to standard concepts. The integrated vocabulary passed all Community Contribution Pipeline requirements and was published in September 2024 on the official OHDSI vocabulary website.

Medical Devices CDM in Korea

In Korea, Medical Device Vigilance CDM (MDV-CDM) R&D project is currently being conducted to establish a comprehensive framework for medical device surveillance

Goal of this project is **to enhance post-market safety surveillance and management of medical devices**

Implementing CDM utilizing both **EDI codes** (de facto Korean standard) and **UDI codes** (international standard)

Medical Devices CDM in Korea

2024

Implementation

- Conversion of 4 new tertiary hospitals
- Including Severance Hospital, Ajou University Hospital

Comparative Analysis

- Knee Prosthesis
- Aortic Valve Implant
- Hemostatic Device

2025

Implementation

- Conversion of 5 new tertiary hospitals
- including Seoul National University Hospital, Korea University Medicine

Comparative Analysis

- LAA Occluder
- Biliary Stent
- Breast Implant

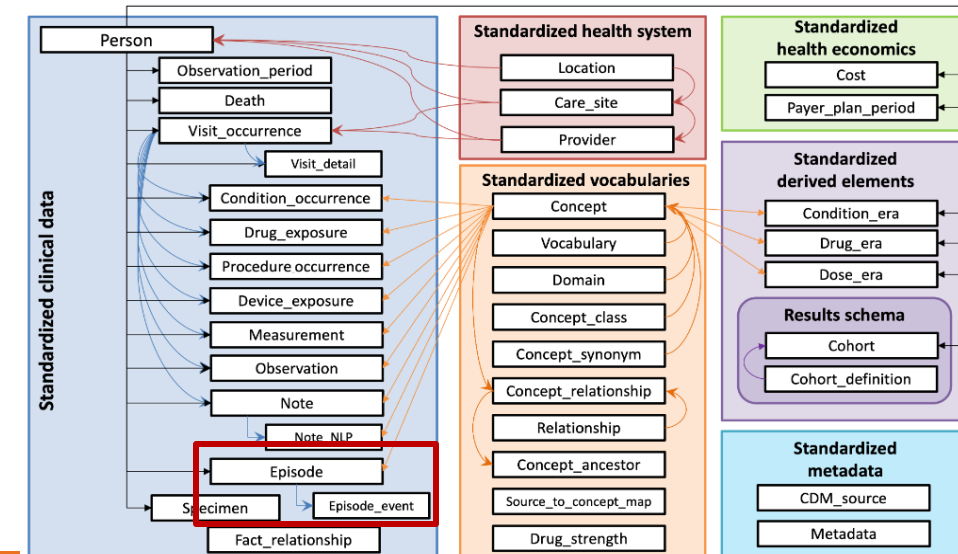

Activation of MDV-CDM

Oncology CDM

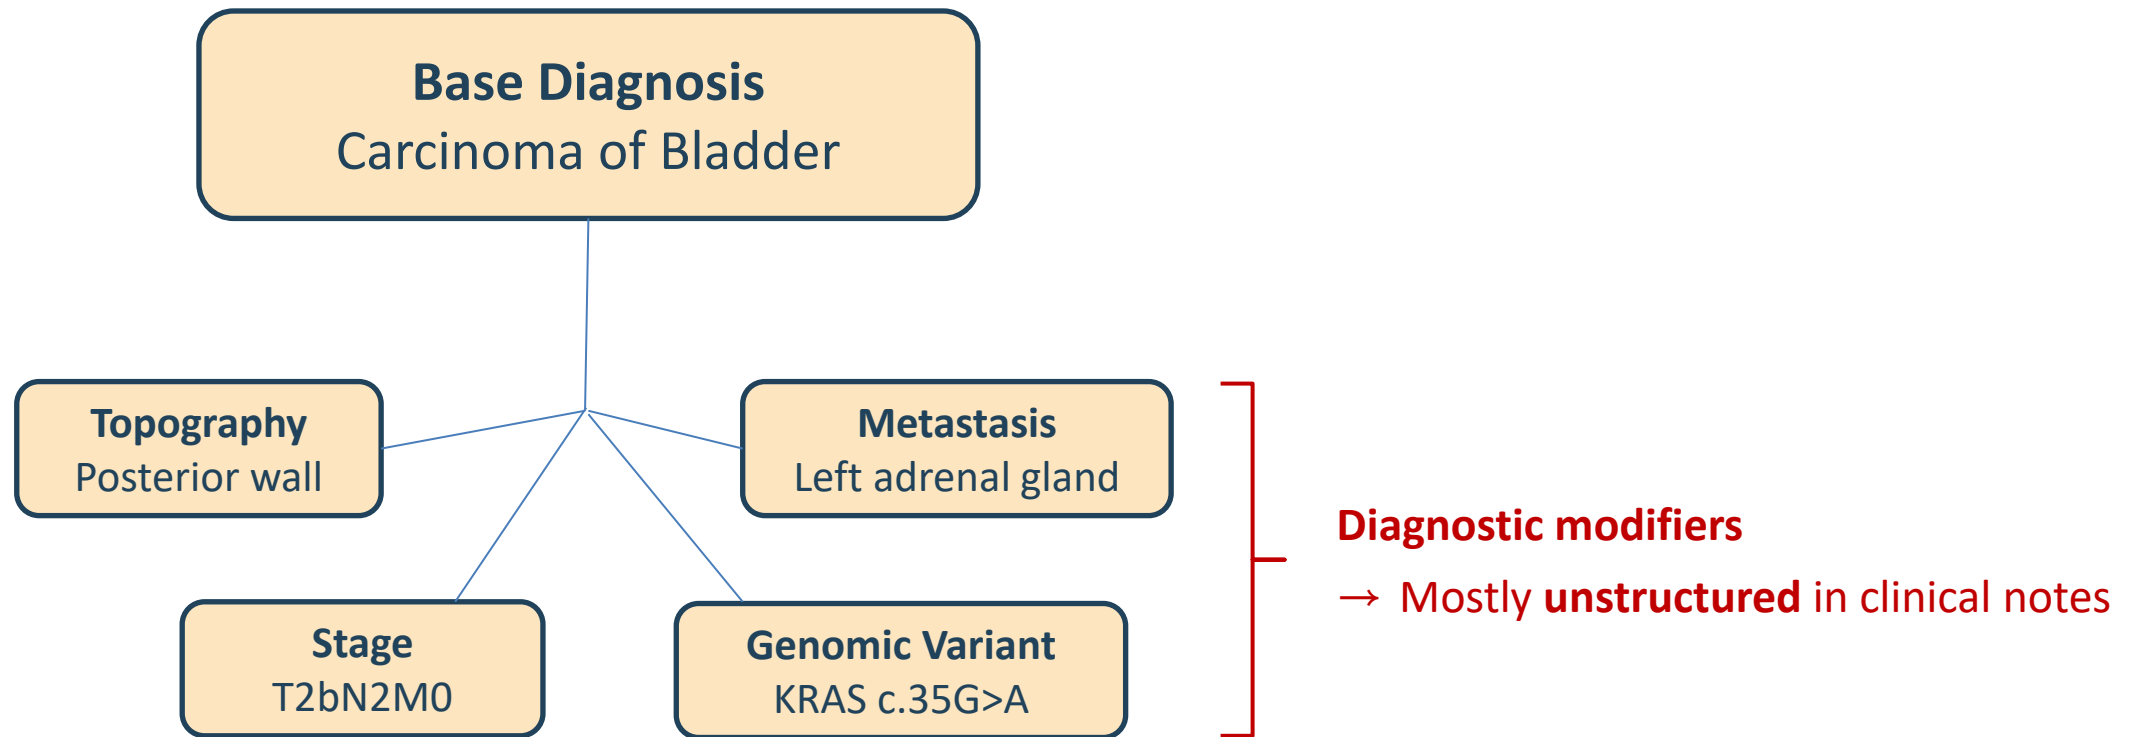

- The **Oncology WG** developed the **OMOP Oncology Extension** to integrate the cancer-specific information into the OMOP CDM
 - Cancer disease model
 - Cancer diagnosis: base diagnosis + diagnostic modifiers (e.g. stage, grade, dimension)
 - Cancer treatment model
 - Composite level treatment (regimen) + Individual level (drug exposure)
 - Cancer episode model
 - Patient's journey, including diagnosis, treatment, and outcome

Challenges of EHR for Oncology CDM

- Cancer-specific data is not structured in EHR, making it challenging to standardize to Oncology CDM

Challenges of EHR for Oncology CDM

- Cancer-specific data is not structured in EHR, making it challenging to standardize to Oncology CDM

Example: FOLFOX (Fluorouracil, Leucovorin, Oxaliplatin) up to 6 cycles

Regimen] Mostly not available
Cycle 1	Cycle 2	Cycle 3	Cycle 4	Cycle 5	Cycle 6	
Fluorouracil	Fluorouracil	Fluorouracil	Fluorouracil	Fluorouracil	Fluorouracil	
Leucovorin	Leucovorin	Leucovorin	Leucovorin	Leucovorin	Leucovorin	
Oxaliplatin	Oxaliplatin	Oxaliplatin	Oxaliplatin	Oxaliplatin	Oxaliplatin	

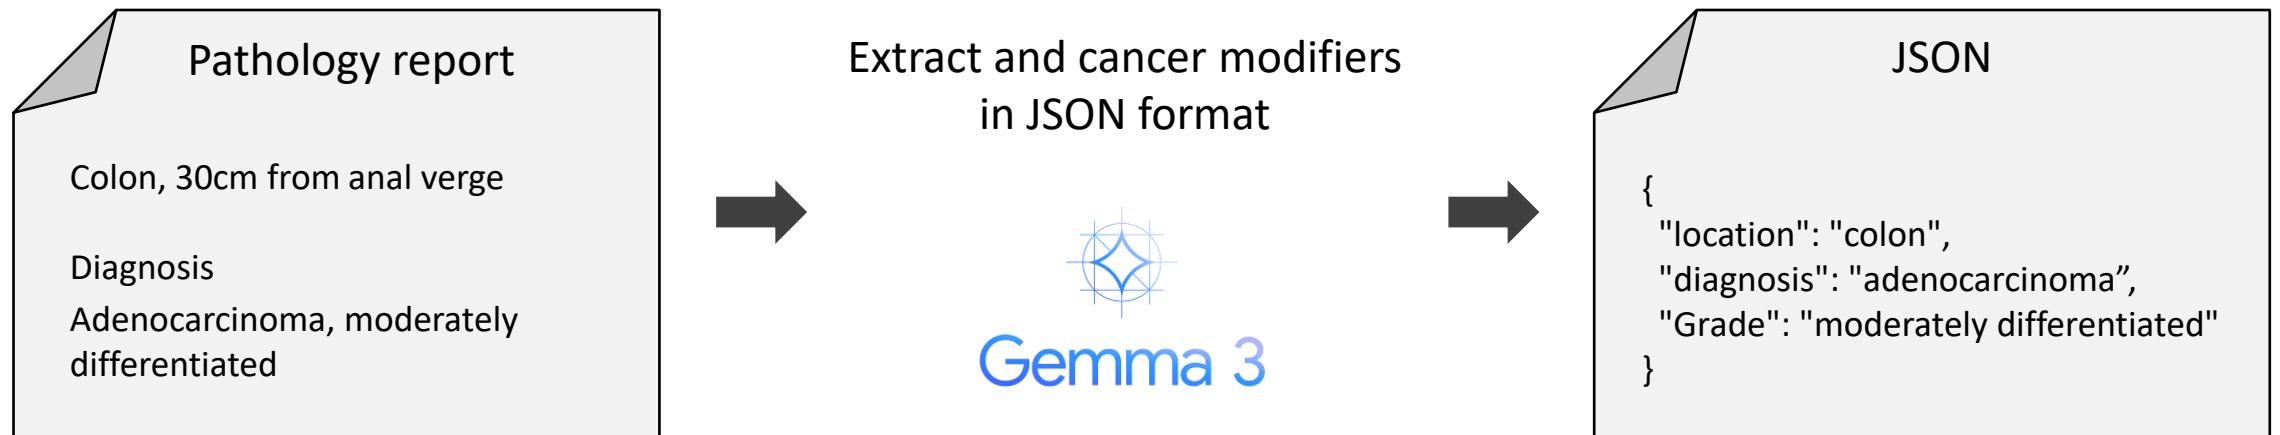

Objectives

- Populating OMOP Oncology CDM from the EHR
 - Leverage **generative LLMs** to **structure diagnostic modifiers** from pathology report
 - Aggregate granular **drug exposure** data into **structured regimen** eras
 - Abstract **patients' clinical journeys** into a structured **episode table**

Current Progress in Korea

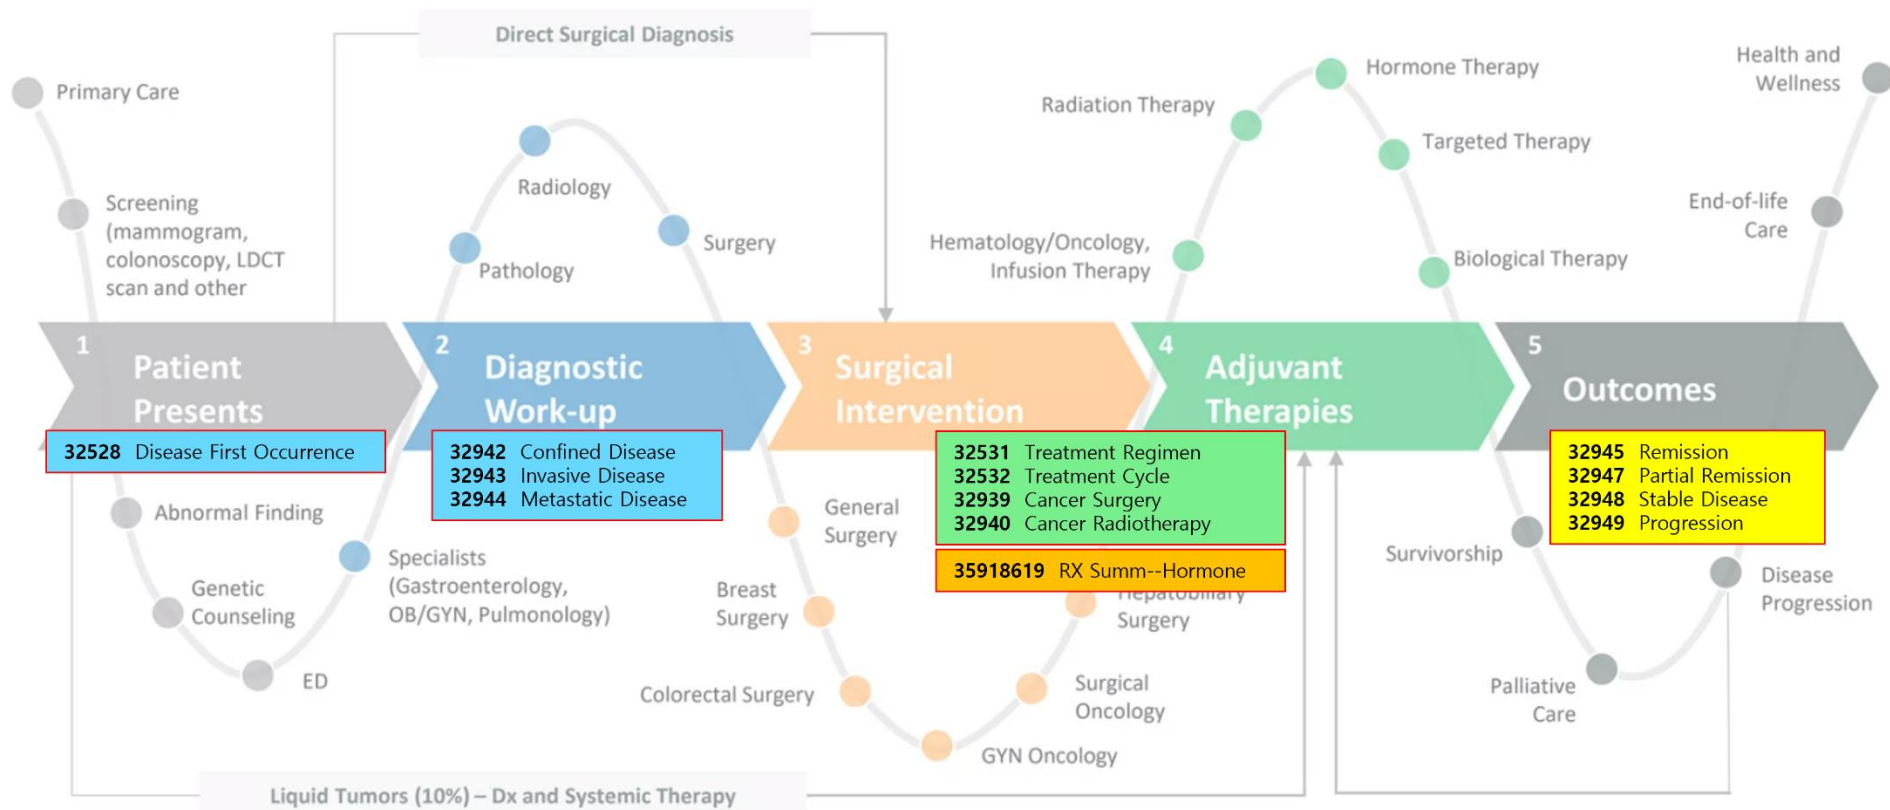

- We are developing strategy to extract the cancer information from pathology report using state-of-the-art LLM

Current Progress in Korea

- We are aggregating lower-level clinical events to generate Episode table

OASIS-CDM

Osteoporosis Analysis and Surveillance Initiative using Standardized data (OASIS)

- The OASIS-CDM in Korea was established in 2023 by **four tertiary care centers** that standardized to version 5.3 of the OMOP-CDM
 - Severance Hospital (6.27 million individuals from January 2006 to August 2023)
 - Asan Medical Center (4.95 million individuals from October 2004 to December 2020)
 - Korea University Anam Hospital (2.18 million individuals from January 2009 to June 2021)
 - Inha University Hospital (1.98 million individuals from February 2001 to February 2019)

OASIS-CDM

- OASIS-CDM provides a collaborative network to **discuss research topics about osteoporosis**, and enables investigations through **real-world, multi-institutional cohort analyses**, ultimately supporting clinical decisions
 - Research topics are discussed through regular monthly meetings
 - The discussion leads to the development of a standardized study protocol and the sharing of analysis codes across institutions

OASIS-CDM

Background: Osteoporosis is a global health concern. Despite emerging treatment options for this condition, limited data are available on hospital practices in South Korea. This study addresses the need for a hospital network database that reflects changes in routine clinical practice for osteoporosis in a timely manner.

Methods: We analyzed prescription patterns for anti-osteoporosis medications (AOMs) in postmenopausal women aged ≥50 years diagnosed with osteoporosis between 2012 and 2021 using data from Osteoporosis Analysis and Surveillance Initiative using Standardized data (OASIS) (four tertiary hospitals in South Korea) and a nationwide database from the Health Insurance Review and Assessment (HIRA) Service. AOMs were categorized into antiresorptive and anabolic agents, with a focus on secular changes in the use of oral bisphosphonates, denosumab, selective estrogen receptor modulators (SERMs), and anabolic agents.

Results: In the OASIS cohort, oral bisphosphonates were the most prescribed first-line AOM (49.0%), followed by denosumab (15.7%) and SERMs (18.0%). Denosumab use increased from 2% in 2016 to 40% in 2020, while oral bisphosphonate use declined from 69% in 2012 to 22% in 2021. The use of anabolic agents, including romosozumab and teriparatide, doubled to 6% after 2019. In the HIRA cohort, parenteral bisphosphonates were most common (54.3%), with significant denosumab use (17.3%).
